

# Introduction: the notion of magic in popular music discourse

This special issue focuses on the intersection of popular music and the notion of magic, offering a small but hopefully precise and enlightening cross-section of the many and various ways in which musicians, audiences and critics apply this notion to popular songs and music events. The term ‘magic’, in its adjectival or noun form, is often used as a catch-all synonym for admiration, creativity or success, and many studies have already insisted upon the ‘magic’ capacity of a performer to leave their audience spellbound (e.g. Looseley 2015, p. 116 on Edith Piaf; Nancy Guy 2015 on Beverly Sills; there are too many to cite). This issue focuses rather less on the perceived magic (aura) of individual artists and more on the compositional and discursive processes that generate rare and intense connections between humans, and which practitioners qualify as ‘magic’. Whether the term invokes a presumably lost sense of spirituality, a sense of intellectual bafflement, or yet something else, it hides assumptions and values that we propose to unravel.

## Music and magic – a long and troubled history

There are many known historical links between music and magic since at least the Antiquity. Joscelyn Godwin’s 1987 anthology still provides a useful survey of such connections, starting with the theory of ‘the music of the spheres’ or universal harmony (*harmonia mundi*). According to this theory, a universal system of coherence exists between the celestial and the human worlds, and as the planets’ rotation produces musical tones, so human souls resonate in harmony with what is around them.<sup>1</sup> Here, music provides a metaphor as well as a structure for understanding the analogy between the two worlds, and what is ‘magic’ about this theory is that outwardly different and distinct objects (a planet, a man, a soul, a crop) are thought to have an influence upon one another at a remove (Godwin 1987, p. 10). In the medieval period, God was believed to be at the origin of such patterns, but in 16th- and 17th-century Western Europe, with the early development of what came to be called ‘modern’ science, conflicts started to emerge among theorists about the value of ‘natural magic’, or the benefits of considering the world as ‘magically’ interlocked in a series of harmonious principles. Isaac Newton is one of the first scientists to, on the one hand, stay influenced by the theory of *harmonia mundi*, while on the other distancing himself from it when proposing mathematical formulae deduced from experience to explain existing relationships between sound waves, light, air and electricity (Gouk 2017 p. 36).

<sup>1</sup> In the domains of anthropology and the neurosciences, a growing body of research is examining the claim that music’s sonic vibrations are ‘magic’ in the sense of enabling the control of psychological responses to stimuli (see Stoichita 2017).
