ICRP Publication 105 ICRP,2008-12-22 This report was prepared to underpin the Commission s 2007 Recommendations with regard to the medical exposure of patients including their comforters and carers and volunteers in biomedical research It addresses the proper application of the fundamental principles justification optimisation of protection and application of dose limits of the Commission s 2007 Recommendations to these individuals With regard to medical exposure of patients it is not appropriate to apply dose limits or dose constraints because such limits would often do more harm than good Often there are concurrent chronic severe or even life threatening medical conditions that are more critical than the radiation exposure The emphasis is then on justification of the medical procedures and on the optimisation of radiological protection In diagnostic and interventional procedures justification of procedures for a defined purpose and for an individual patient and management of the patient dose commensurate with the medical task are the appropriate mechanisms to avoid unnecessary or unproductive radiation exposure Equipment features that facilitate patient dose management and diagnostic reference levels derived at the appropriate national regional or local level are likely to be the most effective approaches In radiation therapy the avoidance of accidents is a predominant issue With regard to comforters and carers and volunteers in biomedical research dose constraints are appropriate Over the last decade the Commission has published a number of documents that provided detailed advice related to radiological protection and safety in the medical applications of ionising radiation Each of the publications addressed a specific topic defined by the type of radiation source and the medical discipline in which the source is applied and was written with the intent of communicating directly with the relevant medical practitioners and supporting medical staff This report consolidates that advice

radiation doses to patients and to embryos fetuses and children forms a central part of the book Phantom models biokinetic models calculations and software solutions are all considered and a further chapter is devoted to quality assurance and reference levels Occupational exposure also receives detailed attention Exposure resulting from the production labeling and injection of radiopharmaceuticals and from contact with patients is discussed and shielding calculations are explained The book closes by considering exposure of the public and summarizing the rules of thumb for radiation protection in nuclear medicine This is an ideal textbook for students and a ready source of useful information for nuclear medicine specialists and medical physics experts

Drug Discovery and Evaluation: Methods in Clinical Pharmacology H.Gerhard Vogel,Jochen Maas,Alexander Gebauer,2010-12-15 Drug Discovery and Evaluation has become a more and more difficult expensive and time consuming process The effect of a new compound has to be detected by in vitro and in vivo methods of pharmacology The activity spectrum and the potency compared to existing drugs have to be determined As these processes can be divided up stepwise we have designed a book series Drug Discovery and Evaluation in the form of a recommendation document The methods to detect drug targets are described in the first volume of this series Pharmacological Assays comprising classical methods as well as new technologies Before going to man the most suitable compound has to be selected by pharmacokinetic studies and experiments in toxicology These preclinical methods are described in the second volume Safety and Pharmacokinetic Assays Only then are first studies in human beings allowed Special rules are established for Phase I studies Clinical pharmacokinetics are performed in parallel with human studies on tolerability and therapeutic effects Special studies according to various populations and different therapeutic indications are necessary These items are covered in the third volume Methods in Clinical Pharmacology

Cyprus Medicon 2016 is the XIV in the series of regional meetings of the International Federation of Medical and Biological
Engineering IFMBE in the Mediterranean The goal of Medicon 2016 is to provide updated information on the state of the art
on Medical and Biological Engineering and Computing under the main theme Systems Medicine for the Delivery of Better
Healthcare Services Medical and Biological Engineering and Computing cover complementary disciplines that hold great
promise for the advancement of research and development in complex medical and biological systems Research and
development in these areas are impacting the science and technology by advancing fundamental concepts in translational
medicine by helping us understand human physiology and function at multiple levels by improving tools and techniques for
the detection prevention and treatment of disease Medicon 2016 provides a common platform for the cross fertilization of
ideas and to help shape knowledge and scientific achievements by bridging complementary disciplines into an interactive and
attractive forum under the special theme of the conference that is Systems Medicine for the Delivery of Better Healthcare

theme presented in 3 plenary sessions 29 parallel scientific sessions and 12 special sessions The Future of Low Dose
Radiation Research in the United States National Academies of Sciences, Engineering, and Medicine, Division on Earth and
Life Studies, Nuclear and Radiation Studies Board, 2020-01-13 Exposures at low doses of radiation generally taken to mean
doses below 100 millisieverts are of primary interest for setting standards for protecting individuals against the adverse
effects of ionizing radiation However there are considerable uncertainties associated with current best estimates of risks and
gaps in knowledge on critical scientific issues that relate to low dose radiation The Nuclear and Radiation Studies Board of
the National Academies hosted the symposium on The Future of Low Dose Radiation Research in the United States on May 8
and 9 2019 The goal of the symposium was to provide an open forum for a national discussion on the need for a long term
strategy to guide a low dose radiation research program in the United States The symposium featured presentations on low

dose radiation programs around the world panel discussions with representatives from governmental and nongovernmental organizations about the need for a low dose radiation research program reviews of low dose radiation research in epidemiology and radiation biology including new directions and lessons to be learned from setting up large research programs in non radiation research fields This publication summarizes the presentation and discussion of the symposium
