Molecular and Diagnostic Procedures in Mycoplasmaology ,1996-02-21 This book and its companion Volume I concentrate on new procedures especially those based on the new molecular methodology developed within the past decade This volume deals with the new genetic and immunological tools applied to the diagnosis of mycoplasma infections of humans animals plants insects and all cultures Volume I outlines the approaches techniques and procedures applied to cell and molecular biology studies of mycoplasmas Diagnostic genetic probes Immunological tools Antibiotic sensitivity testing Diagnosis of specific diseases Experimental infections Diagnosis of mycoplasma infections of cell cultures *Advances in Botanical Research* J. A. Callow, John H. Andrews, Inez C. Tommerup, 1995-12-04 Harmonious integrated functioning of the whole plant system requires that its various cells tissues and organs should be able to communicate with each other transferring a range of information on environmental conditions physiological and microbial stresses etc In this volume of *Advances in Botanical Research* incorporating *Advances in Plant Pathology* three articles are concerned with different aspects of plant signalling McDonald and Davis consider how shoot systems respond to drying and N deficient soil in terms of their stomatal behaviour and growth via the transmission of root derived chemical signals Malone considers the major hypotheses that have been proposed with particular attention being given to hydraulic pressure signals and the hydraulic dispersal of chemical signals At a different intracellular level of communication a wide variety of second messengers couple extracellular stimuli to a characteristic physiological response Webb et al Consider progress made in establishing similar roles for calcium in plant signalling in the context of the mammalian paradigms The effects of UV B radiation on plants have been extensively investigated in recent years Jordan considers progress in understanding the chain of events from perception of UV B to signal transduction and consequent changes in gene expression and regulation Smith and Smith assess the various hypotheses erected over the years to explain structure and function of the host parasite interface formed by vesicular arbuscular VA mycorrhizas an important and widespread mutualistic symbioses of a wide range of higher and some lower plants

Advances in Botanical Research ,1995-10-16 The twenty first volume in the series focuses on plant pathology and is the first to integrate *Advances in Plant Pathology* into *Advances in Botanical Research* The articles represented strive both to draw insights from relevant biological disciplines into the realm of plant pathology and to reveal the general principles of plant pathology to the broad audience of biologists including undergraduate and postgraduate students researchers and teachers Kombrink and Somssich address how plant pathogens communicate at the genetic and biochemical level in determining resistance or susceptibility This general theme is continued in articles on the nature of fungal wilt diseases Beckman and Roberts plant virus infection de Zoeten and the gene for gene interactions between plants and fungi de Wit Ehrlich takes up the timely issue of how pressure to expand and intensify agriculture is influencing agroecosystems and natural ecosystems on a global scale The current status and future prospects of chestnuts in health and disease is considered

by Anagnostakis In an article on phytoplasmas Kirkpatrick and Smart review the recent application of molecular techniques to the inference of taxonomic and phylogenetic relationships among mycoplasma like organisms To conclude the volume Savary and colleagues show how a form of systems analysis can be used to handle large and complex data sets in epidemiology

Mycoplasma Cell Membranes Shlomo Rottem, Itzhak Kahane, 2012-12-06 The mycoplasmas a trivial name used to denote organisms included in the class Mollicutes are a group of prokaryotic organisms comprising more than 120 species distinguished from ordinary bacteria by their small size and the total lack of cell walls The absence of a cell wall in mycoplasmas is a characteristic of outstanding importance to which the mycoplasmas owe many of their peculiarities for example their morphological instability osmotic sensitivity unique ion pumping systems resistance to antibiotics that interfere with cell wall bio synthesis and susceptibility to lysis by detergents and alcohols The fact that the mycoplasma cells contain only one membrane type the plasma membrane constitutes one of their most useful properties for membrane studies once the membrane is isolated it is uncontaminated with other membrane types Another advantage in using mycoplasmas as models for membrane studies stems from the fact that their membrane lipid composition can be altered in a controlled manner This characteristic results from the partial or total inability of the mycoplasmas to synthesize long chain fatty acids and cholesterol making mycoplasmas dependent on the supply of fatty acids from the growth medium The ability to introduce controlled alterations in the fatty acid composition and cholesterol content of mycoplasma membranes has been utilized in studying the molecular organization and physical properties of biological membranes

Rapid Diagnosis of Mycoplasmas Itzhak Kahane, Amiram Adoni, 2012-12-06 This compendium is the result of the FEMS Workshop on Rapid Diagnosis of Mycoplasmas which I organized and which took place in Jerusalem Israel August 11-23 1991 The first week's sessions were held at a resort on the outskirts of Jerusalem and consisted of lectures and discussions This part was modelled along the lines of the Gordon Conference in the USA i.e. in an intimate atmosphere in which everyone could mix and exchange ideas and was very beneficial About 100 scientists from around the world attended the first week During the first week the biology molecular biology and pathophysiology of mycoplasmas as well as all the main diagnostic methods were covered including both conventional and the newer technologies The session on mycoplasmas in the human urogenital tracts was held in conjunction with the Israel Society for the Study and Prevention of Sexually Transmitted Disease The second week was a laboratory session and was held at the Hebrew University Hadassah Medical School campus in Ein Karem Jerusalem All experiments were conducted by eminent specialists in their field The lab session had 36 participants from 19 countries who used the most modern techniques for the diagnosis of mycoplasmas in medicine veterinary medicine and agriculture The efficacy of several commercial kits were also tested at this time I want to again thank everyone who helped and supported this workshop as well as the authors of the various chapters

Molecular Biology and Pathogenicity of Mycoplasmas Shmuel Razin, Richard Herrmann, 2007-05-08 was the

result of the efforts of Robert Cleverdon The rapidly developing discipline of molecular biology and the rapidly expanding knowledge of the PPLO were brought together at this meeting In addition to the PPLO specialists the conference invited Julius Marmur to compare PPLO DNA to DNA of other organisms David Garfinkel who was one of the first to develop computer models of metabolism Cyrus Levinthal to talk about coding and Henry Quastler to discuss information theory constraints on very small cells The conference was an announcement of the role of PPLO in the fundamental understanding of molecular biology Looking back 40 some years to the Connecticut meeting it was a rather bold enterprise The meeting was international and inter disciplinary and began a series of important collaborations with influences resonating down to the present If I may be allowed a personal remark it was where I first met Shmuel Razin who has been a leading figure in the emerging mycoplasma research and a good friend This present volume is in some ways the fulfillment of the promise of that early meeting It is an example of the collaborative work of scientists in building an understanding of fundamental aspects of biology

Methods in Mycoplasmology V2 Joseph Tully, 2012-12-02 Methods in Mycoplasmology Volume II Diagnostic Mycoplasmology is the second of a two volume series that resulted from cumulative efforts to meet the need for standardized techniques in mycoplasmology The book is organized into five sections Section A discusses techniques for isolating mycoplasmas from humans These include the recovery of mycoplasmas from the respiratory and genitourinary tracts from blood and special tissues and serological Identification of mycoplasmas from humans Section B focuses on techniques for isolating mycoplasmas from animals including the recovery and identification of avian bovine caprine ovine canine and feline mycoplasmas Section C presents techniques for isolating mycoplasmas from cell cultures These include agar and broth techniques the use of indicator cell lines and DNA fluorochrome staining Section D discusses techniques for isolating mycoplasmas from plants and insects Section E describes some of the techniques that are useful in evaluating the pathogenicity of mycoplasmas ureaplasmas and spiroplasmas Section F defines some of the techniques useful in virus detection by electron microscopy and presents methods for isolating and characterizing viruses from both mycoplasmas and spiroplasmas

The Mycoplasmas V2 J Tully, 2012-12-02 The Mycoplasmas Volume II Human and Animal Mycoplasmas is a volume of a comprehensive three volume series encompassing various facets of mycoplasmology This volume deals with host parasite relationships of mycoplasmas in man and animals with emphasis on recent developments in the study of classical mycoplasmal diseases of animals such as cattle sheep goats swine and chickens This volume shows the knowledge about mycoplasmal diseases of man including those involving the respiratory and genitourinary tracts Detailed information on the humoral and cellular immune responses to mycoplasmas which are assuming an ever increasing significance in the understanding of the pathogenesis of human and animal mycoplasmal diseases is also given This book ends with reviews on mycoplasmas as arthritogenic agents and the interaction of mycoplasmas with cell and organ cultures This book will serve as a standard reference work for mycoplasmologists as well as for other interested microbiologists cellular and molecular
