Fortschritte der Chemie Organischer Naturstoffe / Progress in the Chemistry of Organic Natural Products, 2012-12-06 The cyanogenic glycosides here defined as glycosidic derivatives of α -hydroxynitriles represent a rather limited class of natural products which are widely distributed in the plant kingdom and to a small extent even in animals A characteristic feature of these glycosides is their ability to release hydrocyanic acid on treatment with dilute acids or appropriate enzymes The term cyanogenic is used to designate this property regardless of whether pure substances plants or animals are serving as the source In the latter cases the term cyanophoric is occasionally employed synonymously

Cyanogenesis in plants was probably first discovered by SCHRADER in 1803 while working with bitter almonds. In 1830 ROBIQUET and BOUTRON CHARLARD successfully succeeded in isolating the parent glycoside namely amygdalin. Over the years a total of 18 cyanogenic glycosides have been isolated and characterized more or less completely. Table I p 76. It will be noted that the majority of these compounds has been isolated in the era of classical organic chemistry and that progress in discovering new compounds not to mention new structural types has been surprisingly slow. It is worth remembering here that the mechanism of cyanogenesis has been established only in the minority of known cyanogenic species. The cyanogenic glycosides have last been reviewed in 1958 by DILLE MANN 36. Since then no complete reviews in this field have appeared. It is the purpose of the present article to survey the more recent advances and hopefully to stimulate continued interest in these interesting compounds.

Index to Reviews Symposia Volumes and Monographs in Organic Chemistry For the Period 1961-1962 aims to help research workers teachers and students to locate quickly those current reviews in which they may be interested. The format used in the 1940-1960 Index has been retained. While the 1961-1962 issue stands on its own it will be most useful in conjunction with the 1940-1960 volume. Complete author and subject indexes are included with adequate cross indexing in the latter. While the majority of articles listed is directly on organic chemistry there are many which border on biochemistry pharmaceutical chemistry bacteriology technological developments etc. The volume is organized into three parts. Part I contains reviews in journals and periodic publications. Part II presents reviews in symposia collective volumes and non periodical publications. Part III lists monographs on organic chemistry. 1961-1962. Included in this volume are a number of articles which deal specifically with hazards in the use of various chemicals such as perchlorates peroxides solvents insecticides etc. A selection of articles from the Journal of Chemical Education is provided as well as articles in the International Edition of Angewandte Chemie published in English.

Chemistry in the Garden James R Hanson, 2015-11-09

The aim of this book is to describe some aspects of the chemistry and chemical ecology which are found in the garden. In the garden there are numerous interactions between plants the soil and with other organisms in which chemistry plays a central mediating role. The discussion concerns several of the chemically and ecologically interesting compounds that are produced by common ornamental garden plants and vegetables and by the predators that attack them. Many chemists are amateur gardeners and this book is directed at them as well as those with a general interest in the scientific processes involved in the garden.
