Receptor Biochemistry:

Regulation of G Protein Coupled Receptor Function and Expression Jeffrey L. Benovic, 1999-11-12 Recent advances in molecular and cell biology enabling the cloning expression and mutagenesis of signal transduction proteins has prompted an explosion of knowledge in the field of receptor regulation facilitating the discovery of new classes of regulatory proteins and providing a basis and means for manipulating receptor function through multiple intracellular targets This volume covers methods used to examine how the function s of receptors are regulated Understanding how to regulate the function and expression of these receptors is critical in determining how to modify receptors and to translocating receptors away from the cell surface and its recycling Individual chapters focus on specific techniques used to characterize receptors epitope tagging measurement and analysis of receptor phosphorylation analysis of the kinetics of receptor desensitization and assessment of receptor G protein coupling the role of regulatory proteins receptor kinases and phosphatases arrestins in modulating receptor function and the methods used to measure receptor trafficking ligand binding immunofluorescence and expression transcriptional and translational regulation Covers a broad range of important concepts and methodologies which are current in the study of G protein coupled receptors GPCRs G protein coupled receptors make up over 40% of the current pharmacological targets Provides detailed protocols for executing various strategies and offers informed judgments as to what approaches are and aren t useful Volume Editor Jeffrey Benovic is a dominant world leader in the study of receptor regulation of GPCR kinases and is highly respected in the field

Cell Surface Receptors Lee E. Limbird, 2006-06-02 Cell Surface Receptors A Short Course on Theory and Methods 3rd Edition links theoretical insights into drug receptor interactions described in mathematical models with the experimental strategies to characterize the biological receptor of interest The study of receptors has changed considerably over the period of the publication of the three editions of this book The cloning of several genomes makes it unlikely that preparations of receptors now or in the future will arise from their purification as trace proteins from native tissues but rather from a myriad of molecular approaches Nonetheless understanding the molecular mechanisms and ultimately the in vivo biology of these receptors means that investigators will engage in molecular cellular and ultimate in vivo strategies It should be of value to investigators who want to identify characterize and understand the biology of a receptor of interest

C. Hulme, 1990 The acquisition of three dimensional structural information about receptors particularly through the application of crystallographic and other physical techniques requires the purification and handling of significant amounts of receptor proteins This book focuses particularly on strategies which have proven successful in the purification of a number of receptors of pharmacological importance Included are examples of G protein coupled receptors oligomeric receptors which incorporate an integral ion channel and receptor tyrosine kinases Specific aspects include the choice of detergents for solubilization the synthesis and utilization of specific affinity gels and peptide mapping among other key topics There is also an introduction to structure prediction from receptor sequences and the high level expression of cloned receptor genes The book draws on the experience and insight of a number of scientists who have been at the forefront of progress in this difficult and experimentally demanding field Receptor Localization Marjorie Ariano, 1998-07-16 The detection of neurotransmitter receptor locations and distribution densities within the central nervous system and peripheral tissues is receiving intense attention within the neuroscience research community Neurotransmitter receptors which receive the chemical signals sent from one neuron to another are critical links in a highly complex information processing chain Pinpointing receptor sites and systems is crucial for understanding neurological function as well as dysfunction It is also essential for understanding how receptors process information when impacted by such substances as heroin or nicotine or when affected by neurodegenerative disease Receptor Localization Laboratory Methods and Procedures is the first user friendly guide to the latest techniques and approaches being employed to examine the localization of neurotransmitter receptors in the central nervous system and peripheral tissues It covers detection methods that are applicable to a wide variety of receptor systems ranging from genes and ligands to in vivo receptors in individuals and to numerous receptor subtypes such as nicotine muscarine tachykinins dopamine adenosine and GABA The standard laboratory recipes or tricks employed in these detection methods are fully discussed as are the advantages and limitations of each procedure With contributions from leading experts and extensively illustrated this book Discusses receptor ligand binding methods using irreversible and reversible compounds Presents antireceptor antisera technology using synthetic peptides and fusion proteins at both the cellular and subcellular

resolution levels Examines molecular assessments of receptors Describes in situ hybridization reverse transcriptase PCR and fluorescent in situ transcription Covers new visualization paradigms Includes physiological analysis of receptor function cellular detection in the brain slice and cultured neurons Discusses the use of PET and SPECT to assess in vivo receptor distributions in animals and humans Receptor Localization Laboratory Methods and Procedures is an invaluable guide for researchers in the related fields of neurology biochemistry and pharmacology Its lucid descriptions of new detection methods inclusion of experimental examples and emphasis on how these experimental approaches are applicable to particular research areas will appeal to both the experienced researcher and novice investigator

The Pharmacology of Functional, Biochemical, and Recombinant Receptor Systems T. Kenakin, J. A. Angus, 2012-12-06 This the 148th volume of the Handbook of Experimental Pharmacology series focuses on the very core of pharmacology namely receptor theory It is fitting that the originator of receptor pharmacology A J CLARK authored the fourth volume of this series 63 years ago In that volume CLARK further developed his version of receptor theory first described four years earlier in his classic book The Mode of Action of Drugs An examination of the topics covered in volume 4 reveals a striking similarity to the topics covered in this present volume pharmacologists today are still as interested in unlocking the secrets of dose response relationships to reveal the biological and chemical basis of drug action as they were over half a century ago Sections in that 1937 volume such as Curves relating exposure to drugs with biological effects and Implications of monomolecular theory show Clark's keen insight into the essential questions that required answers to move pharmacology forward With the advent of molecular biological cloning of human receptors has come a transformation of receptor pharmacology Thus the expression of human receptors into surrogate host cells helped unlock secrets of receptor mechanisms and stimulus transduction pathways To a large extent this eliminates the leap of faith required to apply receptor activity of drugs tested on animal receptor systems to the human therapeutic arena However a new leap of faith concerning the veracity of the effects found in recombinant systems with respect to natural ones is now required

G Protein-coupled Receptors Jesús Giraldo, Jean-Philippe Pin, 2011 G protein coupled receptors GPCRs are the largest family of cell surface receptors with more than 800 members identified thus far in the human genome The book lies between the fields of chemical biology molecular pharmacology and medicinal chemistry

Receptor Phosphorylation Virinder K. Moudgil, 2018-05-04 The following chapters comprise invited contributions from eminent scientists who are internationally recognized authorities on the subject The chapters have been written to provide the reader with adequate background necessary experimental details and discussion that is easy to comprehend The book has been organized into four different sections The introductory chapter is meant to briefly summarize the contributions of other authors and discuss phosphorylation of receptor systems not covered in the book in detail The chapters in the second section on protein kinases and phosphatases are quite fundamental to the process of phosphorylation and will aid the reader in appreciating the observations and discussions reported in other

chapters The third and fourth sections present discussions on phosphorylation of various receptor systems which are involved in mediating actions of peptide amine and steroid hormones It is hoped that this book will serve as a valuable resource and will be useful to all workers and students in the area of receptor ligand interactions *Alpha-Adrenoceptors: Molecular Biology, Biochemistry and Pharmacology* R. R. Ruffolo Jr.,1991-11-19 *Neurotransmitter Receptors* F. Hucho,1994-03-17 This comprehensive compilation provides a wealth of information on receptor sequences produced by recombinant DNA techniques used in combination with classical biochemistry To minimize redundancies in this wealth of information only a few receptors some of which are typical for a whole group of similar receptors others which are presently of special interest are dealt with in a full size chapter Others are represented in the TIPS Receptor Nomenclature Supplement which is included as a special feature in this book making this volume more useful as a receptor handbook

Receptors, Antibodies and Disease David Evered,Julie Whelan,2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world [Handbook of Receptors and Channels](#) Stephen J. Peroutka,1993-10-20 The cloning sequencing and expression of a variety of membrane receptors and channels indicate the existence of at least four superfamilies of molecular structures that mediate signal transduction Presently more than 400 receptors have been cloned and sequenced The Handbook of Receptors and Channels is the first handbook series to present the enormous amount of new molecular biological receptor data in a practical and useful format Each volume in this remarkable series will focus on a specific molecular superfamily of receptors Complete amino acid sequence information on all cloned receptors as well as relevant pharmacological information will be included Furthermore the format for each of the volumes will be consistent to allow for easy comparisons of different molecular subtypes for a given transmitter G Protein Coupled Receptors is the first volume in this new handbook series Topics covered in future volumes include *Biochemical Messengers* D. Hardie,2013-12-01 The central theme of this book is that systems of cell cell signalling via nerves hormones local mediators and growth factors are not distinct phenomena but branches of one general mechanism These topics therefore can and should be discussed in an integrated manner and the division of cell signalling studies into separate pigeonholes such as neuroscience endocrinology or cancer biology is unnecessary if not counterproductive I also believe it to be unfortunate that there is not a collective term to describe neurotransmitters hormones local mediators and growth factors other than clumsy phrases such as extracellular signal molecule The lack of a short and distinctive word for these entities genuinely hampers people from thinking about them in an integrated way Having decided that it was presumptuous to invent a new term I have chosen in this book the term first messenger to cover all types of extracellular signal molecule because of the widespread acceptance of the term second messenger to represent the

intracellular signal molecules that are produced in response to many of them I have given the book the title biochemical messengers which is a global term to cover both first and second messengers The impetus for writing the book came as must often be the case when I had to put together a course on cell cell signalling for biochemistry students at the University of Dundee *Perspectives on Receptor Classification* Heinz Otto Schild, 1987
