*Financial Market Design by an Agent-Based Model* Takanobu Mizuta, Isao Yagi, 2025-02-10 This is the first book to focus on designing a financial market that works well and that includes making and or modulating detailed regulations and or rules by a computer simulation of an agent based artificial

financial market model ABAFMM The design of a financial market is very important for the development and maintenance of an advanced economy but designing it is not easy because changes in detailed rules even those that seem trivial sometimes have unexpectedly large impacts and side effects in a financial market which is a complex system Traditional economics cannot treat a financial market as a complex system in which micro macro interaction and feedback loops have played essential roles because traditional economics can only treat macrophenomena and micro processes separately ABAFMM can do it however This book explains first why ABAFMMs are needed to design financial markets and which models have good features Following that explanation the book discusses how to build the models Then cases of recent studies and their contributions are shown and finally the difficulties of researchers in this field are considered This book is expected to facilitate the design of more ABAFMMs to contribute to creating financial markets that will further develop and maintain advanced economies
