Book reviews

Mathematical Models in Medical Diagnosis. By M Clinton Miller III, Milton C Westphal Jr, John Rount Reigart II. Pp. 187. £25.50. Praeger: New York, 1981.

This book is unlikely to be directly helpful to the clinician. Apart from a reasonable explanation of the principles of cluster analysis, the general approach is very mathematical and abstract. Even for those whose interests lie in the manipulation of clinical data much of the book might prove hard going.

Statisticians, on the other hand, will find that each chapter ends just when the mathematical problems become interesting.

Rheumatologists who like to keep their reference books up to date may regret that those responsible for producing the two major North American texts did not contrive to stagger the two new editions. As it is, this 10th edition of 'Hollander' arrives almost simultaneously with the second edition of the large textbook edited by Kelley, Harris, Ruddy, and Sledge. The editors on the other hand will, I suspect, give a hollow laugh at the suggestion that it lies within their power to control accurately when the books will appear.

The cover of this new edition is in gold. Curiously this is not to celebrate its 50th birthday, for the first edition of 'Comroe' appeared in 1940. It is, as Dan McCarty explains in his Preface 'to symbolise the current status of the clinical discipline'. However, while seeking to present the very latest state of the specialty, the past is not forgotten, and the Foreword is written by the distinguished previous editor, Dr Joseph Lee Hollander. His account of why he gave up after editing five editions has parallels with the hesitation of composers about completing a ninth symphony! Dr Hollander also contributes two chapters. In arguing again the case for the value of local corticosteroid injections he is now able to quote his personal experience of over 400 000 injections in over 12 000 patients during more than 32 years: 'No other form of treatment for

arthritis has given such consistent local symptomatic relief to so many for so long with so few harmful effects'.

How well does this large textbook serve its purpose? I have now had it on my shelf for six weeks and have used it both to browse and to check particular points, and I find it good - through and through. The size has crept up to nearly 1800 pages, but the publishers remarkably have succeeded in producing a volume which is manageable in the hand and which does not appear likely to start splitting out of its cover with use. The style of printing and layout are clear, and the illustrations mainly very adequate. A considerable improvement on previous editions is the more complete style of the references, giving both title and pagination.

As with previous editions this one provides a satisfactory balance between scientific background, systematic accounts of rheumatic diseases, and related laboratory and management matters. Two great virtues of this book are that, despite being very comprehensive, there is remarkably little overlap between authors, and the style of the writing is mainly excellent. By and large even the more basic scientific chapters are written sufficiently clearly and simply for the general reader to enjoy them. Reading about highly technical subjects can become very tedious when excessive use of jargon and abbreviations replaces clarity and simplicity. Fortunately there is very little of that in this book.

Is there anything to criticise? The only fault I could find concerned the index. Consulting the index is the starting point for much of the use that is made of a volume like this, so it should be good. Unfortunately most large multiauthor textbooks are indexed (as in this case, I suspect) by the publishers, who do not have the authors' insight into which words should be included. To take one small example at random: in Mart Mannik's excellent chapter on rheumatoid factors the author would have been in no doubt that the word 'antiglobulin' might provide a lead in to his subject for someone unfamiliar with the topic. Yet it does not appear in the index. I believe that good indexing is a neglected skill in medical publishing. In a multiauthor text there would appear to be excellent reasons for asking all authors to mark in their manuscripts each and every word that should appear in the index. The publisher can then do the rest.

However, the overall verdict must be that this edition represents a resounding triumph for both editor and publisher. No English speaking rheumatologist will want to be without ready access to a copy, and its usefulness will extend well beyond the specialty.

Mathematical Models In Medical Diagnosis:

Mathematical Models in Medical Diagnosis M. Clinton Miller, Milton C. Westphal, John Routt Reigart, 1981

Mathematical Models of Medical Diagnosis and Treatment Dale Jon Hockstra, 1973 **Computers and Mathematical Models in Medicine** D. Cardus, C. Vallbona, 2013-03-08 The papers gathered in this volume were presented at the medical sessions of the First Conference on Mathematics at the Service of Man held in Barcelona Spain July 11 16 1977 Papers presented at the medical sessions were more numerous than those presented in any other single area of specialization covered in the conference Because of this the Publications Committee resolved that papers presented at medical sessions be published separately from the proceedings of the conference The proceedings of the conference have been published by the Escola Técnica Superior d'Arquitectura de la Universitat Politècnica de Barcelona The papers contained in this volume were selected on the basis of current interest and willingness of the authors to publish They are organized not according to the sequence in which they were presented at the conference but to the extent that this was possible in topic areas As its name indicates the principal purpose of the conference was to underscore the fact that mathematics is a science whose applications are relevant to many aspects of human activity In the opinion of the editors of this volume the conference met its objective with success both in terms of the broad variety of topics covered as well as by the number of nations that were represented at the conference in spite of the special circumstances prevailing in Spain at that time **Systems Engineering Approach to Medical Automation** Robin Felder, Majd Alwan, Mingjun Zhang, 2008 The book offers you a solid understanding of medical automation principles and the latest applications in the field You discover how computers and devices can be used to schedule personnel and services and help maintain a just in time lean and more affordable medical services You learn how to automate your pharmacy and laboratory services for maximum profit and minimum turnaround time Moreover this forward looking book helps you determine how nanotechnology is evolving to solve difficult medical challenges **Fuzzy Logic in Action: Applications in Epidemiology and Beyond** Eduardo Massad, Neli Regina Siqueira Ortega, Laécio Carvalho de Barros, Claudio J. Struchiner, 2009-02-03 Fuzzy Logic in Action Applications in Epidemiology and Beyond co authored by Eduardo Massad Neli Ortega Laécio Barros and Claudio Struchiner is a remarkable achievement The book brings a major paradigm shift to medical sciences exploring the use of fuzzy sets in epidemiology and medical diagnosis arena The volume addresses the most significant topics in the broad areas of epidemiology mathematical modeling and uncertainty embodying them within the framework of fuzzy set and dynamic systems theory Written by leading contributors to the area of epidemiology medical informatics and mathematics the book combines a very lucid and authoritative exposition of the fundamentals of fuzzy sets with an insightful use of the fundamentals in the area of epidemiology and diagnosis The content is clearly illustrated by numerous illustrative examples and several real world applications Based on their profound knowledge of epidemiology and mathematical modeling and on their keen

understanding of the role played by uncertainty and fuzzy sets the authors provide insights into the connections between biological phenomena and dynamic systems as a mean to predict diagnose and prescribe actions An example is the use of Bellman Zadeh fuzzy decision making approach to develop a vaccination strategy to manage measles epidemics in S o Paulo The book offers a comprehensive systematic fully updated and self contained treatise of fuzzy sets in epidemiology and diagnosis Its content covers material of vital interest to students researchers and practitioners and is suitable both as a textbook and as a reference The authors present new results of their own in most of the chapters In doing so they reflect the trend to view fuzzy sets probability theory and statistics as an association of complementary and synergetic modeling methodologies

Information Technology in Medical Diagnostics II Waldemar Wójcik, Sergii Pavlov, Maksat Kalimoldayev, 2019-02-13 For many centuries mankind has tried to learn about his health Initially during the pre technological period he could only rely on his senses Then there were simple tools to help the senses The breakthrough turned out to be the discovery of X rays which gave insight into the human body Contemporary medical diagnostics are increasingly supported by information technology which for example offers a very thorough analysis of the tissue image or the pathology differentiation It also offers possibilities for very early preventive diagnosis Under the influence of information technology traditional diagnostic techniques and new ones are changing More and more often the same methods can be used for both medical and technical diagnostics In addition methodologies are developed that are inspired by the functioning of living organisms Information Technology in Medical Diagnostics II is the second volume in a series showing the latest advances in information technologies directly or indirectly applied to medical diagnostics Unlike the previous book this volume does not contain closed chapters but rather extended versions of presentations made during two conferences XLVIII International Scientific and Practical Conference Application of Lasers in Medicine and Biology Kharkov Ukraine and the International Scientific Internet conference Computer graphics and image processing Vinnitsa Ukraine both held in May 2018 Information Technology in Medical Diagnostics II links technological issues to medical and biological issues and will be valuable to academics and professionals interested in medical diagnostics and IT
