

Mathematics Makes Connections

You probably realize that mathematics underpins a wide range of your daily activities from streaming movies and paying bills online to GPS navigation to predicting the weather to designing more aerodynamic and gas efficient cars.

However, you probably don't realize that the mathematics of streaming movies is closely related to that for GPS navigation, or that the equations for predicting weather have intimate connections to the equations of combustion in gasoline engines. Mathematics is a bridge between many different disciplines.

Mathematical abstraction, where a real-world phenomenon

or behavior is defined by its core characteristics and rules, can help us see how a biological system follows the same patterns as the stock market or how the process of designing a new material is similar to the approach to building a bridge. This cross-cutting applicability is possible because mathematicians frame problems in a generalizable way.

Advancing theoretical foundations in the mathematical sciences leads to impactful applications, but that is often not the whole story. Advances in practical applications can lead to novel theories, which give rise to even more impactful applications. And the cycle continues from there.

Mathematical Sciences:

The Mathematical Sciences in 2025 National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on the Mathematical Sciences in 2025, 2013-06-13 The mathematical sciences are part of nearly all aspects of everyday life the discipline has underpinned such beneficial modern capabilities as Internet search medical imaging computer animation numerical weather predictions and all types of digital communications The Mathematical Sciences in 2025 examines the current state of the mathematical sciences and explores the changes needed for the discipline to be in a strong position and able to maximize its contribution to the nation in 2025 It finds the vitality of the discipline excellent and that it contributes in expanding ways to most areas of science and engineering as well as to the nation as a whole and recommends that training for future generations of mathematical scientists should be re assessed in light of the increasingly cross disciplinary nature of the mathematical sciences In addition because of the valuable interplay between ideas and people from all parts of the mathematical sciences the report emphasizes that universities and the government need to continue to invest in the full spectrum of the mathematical sciences in order for the whole enterprise to continue to flourish long term *Strengthening the Linkages Between the Sciences and the Mathematical Sciences* National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Committee on Strengthening the Linkages Between the Sciences and the Mathematical Sciences, 2000-04-05 Over three hundred years ago Galileo is reported to have said The laws of nature are written in the language of mathematics Often mathematics and science go hand in hand with one helping develop and improve the other Discoveries in science for example open up new advances in statistics computer science operations research and pure and applied mathematics which in turn enabled new practical technologies and advanced entirely new frontiers of science Despite the interdependency that exists between these two disciplines cooperation and collaboration between mathematical scientists and scientists have only occurred by chance To encourage new collaboration between the mathematical sciences and other fields and to sustain present collaboration the National Research Council NRC formed a committee representing a broad cross section of scientists from academia federal government laboratories and industry The goal of the committee was to examine the mechanisms for strengthening interdisciplinary research between mathematical sciences and the sciences with a strong focus on suggesting the most effective mechanisms of collaboration *Strengthening the Linkages Between the Sciences and the Mathematical Sciences* provides the findings and recommendations of the committee as well as case studies of cross discipline collaboration the workshop agenda and federal agencies that provide funding for such collaboration Grants and Awards National Science Foundation (U.S.), **What's Happening in the Mathematical Sciences** Dana Mackenzie, A new twist in knot theory Error term roulette and the Sato Tate conjecture The fifty one percent solution Dominos anyone No seeing is believing Getting with the Mori program The book that time couldn't erase Charting a 248 dimensional world
