completely updated with recent Optimization Methods The book also has a new co author Yinyu Ye of California s Stanford University who has written lots of extra material including some on Interior Point Methods **Linear Programming Computation** Ping-Qi PAN,2023-01-01 This monograph represents a historic breakthrough in the field of linear programming LP since George Dantzig first discovered the simplex method in 1947 Being both thoughtful and informative it focuses on reflecting and promoting the state of the art by highlighting new achievements in LP This new edition is organized in two volumes The first volume addresses foundations of LP including the geometry of feasible region the simplex method and its implementation duality and the dual simplex method the primal dual simplex method sensitivity analysis and parametric LP the generalized simplex method the decomposition method the interior point method and integer LP method The second volume mainly introduces contributions of the author himself such as efficient primal dual pivot rules primal dual Phase I methods reduced D reduced simplex methods the generalized reduced simplex method primal dual deficient basis methods primal dual face methods a new decomposition principle etc Many important improvements were made in this edition The first volume includes new results such as the mixed two phase simplex algorithm dual elimination fresh pricing scheme for reduced cost bilevel LP models and intercepting of optimal solution set In particular the chapter Integer LP Method was rewritten with great gains of the objective cutting for new ILP solvers it controlled cutting branch methods as well as with an attractive implementation of the controlled branch method In the second volume the simplex feasible point algorithm was rewritten and removed from the chapter Pivotal Interior Point Method to form an independent chapter with the new title Simplex Interior Point Method as it represents a class of efficient interior point algorithms transformed from traditional simplex algorithms The title of the original chapter was then changed to Facial Interior Point Method as the remaining algorithms represent another class of efficient interior point algorithms transformed from normal interior point algorithms Without exploiting sparsity the original primal dual face methods were implemented using Cholesky factorization In order to deal with sparse computation two new chapters discussing LU factorization were added to the second volume The most exciting improvement came from the rediscovery of the reduced simplex method In the first edition the derivation of its prototype was presented in a chapter with the same title and then converted into the so called improved version in another chapter Fortunately the author recently found a quite concise new derivation so he can now introduce the distinctive fresh simplex method in a single chapter It is exciting that the reduced simplex method can be expected to be the best LP solver ever With a focus on computation the current edition contains many novel ideas theories and methods supported by solid numerical results Being clear and succinct its content reveals in a fresh manner from simple to profound In particular a larger number of examples were worked out to demonstrate algorithms This book is a rare work in LP and an indispensable tool for undergraduate and graduate students teachers practitioners and researchers in LP and related fields

Algorithms for Convex Optimization Nisheeth K. Vishnoi,2021-10-07 In the last few years Algorithms for Convex

Optimization have revolutionized algorithm design both for discrete and continuous optimization problems For problems like maximum flow maximum matching and submodular function minimization the fastest algorithms involve essential methods such as gradient descent mirror descent interior point methods and ellipsoid methods The goal of this self contained book is to enable researchers and professionals in computer science data science and machine learning to gain an in depth understanding of these algorithms The text emphasizes how to derive key algorithms for convex optimization from first principles and how to establish precise running time bounds This modern text explains the success of these algorithms in problems of discrete optimization as well as how these methods have significantly pushed the state of the art of convex optimization itself **New Trends in Mathematical Programming** F. Giannessi,Sándor Komlósi,Tamás Rapcsák,2013-11-11 Though the volume covers 22 papers by 36 authors from 12 countries the history in the background is bound to Hungary where in 1973 Andras Pn kopa started to lay the foundation of a scientific forum which can be a regular meeting spot for experts of the world in the field Since then there has been a constant interest in that forum Headed at present by Tamas Rapcsak the Laboratory of Operations Research and Decisions Systems of the Computer and Automation Institute Hungarian Academy of Sciences followed the tradition in every respect namely conferences were organized almost in every second year and in the same stimulating area in the Matra mountains The basic fields were kept providing opportunities for the leading personalities to give voice to their latest results The floor has been widened recently for the young generation ensuring this way both a real location for the past present and future experts to meet and also the possibility for them to make the multicoloured rainbow of the fields unbroken and continuous The volume is devoted to the memory of Steven Vajda one of the pioneers on mathematical programming born is Hungary In 1992 he took part in the XIth International Conference on Mathematical Programming at Matrafiired where with his bright personality he greatly contributed to the good spirituality of the event We thank Jakob Krarup for his reminiscence on the life and scientific activities of late Steven Vajda **Linear-Fractional Programming Theory, Methods, Applications and Software** E.B. Bajalinov,2013-12-01 This is a book on Linear Fractional Programming here and in what follows we will refer to it as LFP The field of LFP largely developed by Hungarian mathematician B Martos and his associates in the 1960 s is concerned with problems of op timization LFP problems deal with determining the best possible allo cation of available resources to meet certain specifications In particular they may deal with situations where a number of resources such as people materials machines and land are available and are to be combined to yield several products In linear fractional programming the goal is to determine a per missible allocation of resources that will maximize or minimize some specific showing such as profit gained per unit of cost or cost of unit of product produced etc Strictly speaking linear fractional programming is a special case of the broader field of Mathematical Programming LFP deals with that class of mathematical programming problems in which the relations among the variables are linear the con straint relations i e the restrictions must be in linear form and the

function to be optimized i e the objective function must be a ratio of two linear functions *Handbook of Mathematical Models and Algorithms in Computer Vision and Imaging* Ke Chen,Carola-Bibiane Schönlieb,Xue-Cheng Tai,Laurent Younes,2023-02-24 This handbook gathers together the state of the art on mathematical models and algorithms for imaging and vision Its emphasis lies on rigorous mathematical methods which represent the optimal solutions to a class of imaging and vision problems and on effective algorithms which are necessary for the methods to be translated to practical use in various applications Viewing discrete images as data sampled from functional surfaces enables the use of advanced tools from calculus functions and calculus of variations and nonlinear optimization and provides the basis of high resolution imaging through geometry and variational models Besides optimization naturally connects traditional model driven approaches to the emerging data driven approaches of machine and deep learning No other framework can provide comparable accuracy and precision to imaging and vision Written by leading researchers in imaging and vision the chapters in this handbook all start with gentle introductions which make this work accessible to graduate students For newcomers to the field the book provides a comprehensive and fast track introduction to the content to save time and get on with tackling new and emerging challenges For researchers exposure to the state of the art of research works leads to an overall view of the entire field so as to guide new research directions and avoid pitfalls in moving the field forward and looking into the next decades of imaging and information services This work can greatly benefit graduate students researchers and practitioners in imaging and vision applied mathematicians medical imagers engineers and computer scientists Mathematical Developments Arising from Linear Programming Jeffrey C. Lagarias,Michael J. Todd,1990 There has been much recent work in linear and non linear programming centred on understanding and extending the ideas underlying Karmarkar s interior point linear programming algorithm This volume is the result of an AMS conference on mathematical developments arising from linear programming
