It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

*Statistical Methods in Radio Wave Propagation* W. C. Hoffman, 2013-10-22 Statistical Methods in Radio Wave Propagation contains the proceedings of a symposium held at the University of California Los Angeles on June 18 20 1958 The papers explore the use of statistical techniques in the analysis and interpretation of data pertaining to the propagation of radio waves The discussion is organized around three themes statistical theory and methodology radio propagation phenomena having a joint statistical and physical structure and instrumentation This book is comprised of 23 chapters and begins by summarizing the principal results of a series of

statistical studies on the intensity distributions due to rapid fading The reader is then introduced to some theoretical investigations on fading phenomena radio measurement of ionospheric drift as a problem in parameter estimation the propagation of random radiation in free space and the statistics of working spells and periods of breakdown for a number of radio links in series The remaining chapters deal with airborne measurements of tropospheric index of refraction fluctuations the distribution of the fade lengths of a randomly fading radio signal diversity statistics in scatter propagation and extrapolation of spatial correlation functions The final chapter describes a rapid statistical data processing system for radio propagation research This monograph will be a useful resource for both radio scientists and statisticians
