researchers academicians scholars practitioners instructors and students      Making the Connection Marilyn Paula Carlson, Chris Rasmussen, 2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction      *Foundation Years and Why They Matter* Stephen Leech, Sarah Hale, 2024-11-07 *Foundation Years and Why They Matter* presents a selection of case studies illustrating the diversity of foundation year provision and delivering a compelling narrative about what foundation years are what they do how they do it and the impact they have      **Modelling and Applications in Mathematics Education** Peter L. Galbraith, Hans-Wolfgang Henn, Mogens Niss, 2007-12-05 Among the themes that have been central to mathematics education during the last 30 years are those of mathematical modelling and applications of mathematics to extra mathematical fields More generally we refer to these as relations between mathematics and the extra mathematical world some times also called the real world or preferably according to Henry PoUak the rest of the world That applications and modelling have been important themes in mathematics education can be inferred from the wealth of literature on these topics including material generated from a multitude of national and international conferences In particular let us mention firstly the ICMEs the International Congresses on Mathematical Education with their regular working or topic groups and lectures on applications and modelling and secondly the series of ICTMAs the International Conferences on the Teaching of Mathematical Modelling and Applications which have been held biennially since 1983 Their Proceedings and Survey Lectures have addressed the state of the art at the relevant time and contain many examples studies conceptual contributions and resources involving relations between the real world and mathematics for all levels of the educational system In curricula and textbooks we find today

many more references to real world phenomena and problems than say twenty years ago

**Mathematics for Social Justice** Catherine A. Buell, Bonnie Shulman, 2021-11-18 Mathematics instructors are always looking for ways to engage students in meaningful and authentic tasks that utilize mathematics At the same time it is crucial for a democratic society to have a citizenry who can critically discriminate between fake and reliable news reports involving numeracy and apply numerical literacy to local and global issues This book contains examples of topics linking math and social justice and addresses both goals There is a broad range of mathematics used including statistical methods modeling calculus and basic algebra The range of social issues is also diverse including racial injustice mass incarceration income inequality and environmental justice There are lesson plans appropriate in many contexts service learning courses quantitative literacy reasoning courses introductory courses and classes for math majors What makes this book unique and timely is that the most previous curricula linking math and social justice have been treated from a humanist perspective This book is written by mathematicians for mathematics students Admittedly it can be intimidating for instructors trained in quantitative methods to venture into the arena of social dilemmas This volume provides encouragement support and a treasure trove of ideas to get you started The chapters in this book were originally published as a special issue of the journal PRIMUS Problems Resources and Issues in Mathematics Undergraduate Studies

Elliptic Systems of Phase Transition Type Nicholas D. Alikakos, Giorgio Fusco, Panayotis Smyrnelis, 2019-01-21 This book focuses on the vector Allen Cahn equation which models coexistence of three or more phases and is related to Plateau complexes non orientable objects with a stratified structure The minimal solutions of the vector equation exhibit an analogous structure not present in the scalar Allen Cahn equation which models coexistence of two phases and is related to minimal surfaces The 1978 De Giorgi conjecture for the scalar problem was settled in a series of papers Ghoussoub and Gui 2d Ambrosio and Cabré 3d Savin up to 8d and del Pino Kowalczyk and Wei counterexample for 9d and above This book extends in various ways the Caffarelli-Cordoba density estimates that played a major role in Savin's proof It also introduces an alternative method for obtaining pointwise estimates Key features and topics of this self contained systematic exposition include Resolution of the structure of minimal solutions in the equivariant class  $a$  for general point groups and  $b$  for general discrete reflection groups thus establishing the existence of previously unknown lattice solutions Preliminary material beginning with the stress energy tensor via which monotonicity formulas and Hamiltonian and Pohozaev identities are developed including a self contained exposition of the existence of standing and traveling waves Tools that allow the derivation of general properties of minimizers without any assumptions of symmetry such as a maximum principle or density and pointwise estimates Application of the general tools to equivariant solutions rendering exponential estimates rigidity theorems and stratification results This monograph is addressed to readers beginning from the graduate level with an interest in any of the following differential equations ordinary or partial nonlinear analysis the calculus of variations the relationship of minimal surfaces to diffuse interfaces or the applied mathematics of

increasingly prevalent It is crucial for teachers to hear reflections of others experiences to remind them that they are not alone in their work provide opportunities for them to find connections with fellow educators and encourage them to engage in reflective practices of their own Teacher Reflections on Transitioning From K 12 to Higher Education Classrooms provides a collection of reflections from educators on their varied experiences within education and how and why they have pursued a place in academia This book speaks to the humanistic side of academia by acknowledging the multiple passions professions and pathways that led each of the authors to academia It is unique in that it is laced with the lived realities of the human side of academia from a shared stories perspective Covering topics such as lifelong learners and identity shifts this major reference work is ideal for academicians researchers scholars practitioners principals administrators educators and students

**Comparison of Native-English and Native-Korean Speaking University Students' Discourses [i.e. Discourses] on Infinity and Limit** Dong-Joong Kim,2009      Mathematical Practitioners and the Transformation of Natural Knowledge in Early Modern Europe Lesley B. Cormack,Steven A. Walton,John A. Schuster,2017-03-15 This book argues that we can only understand transformations of nature studies in the Scientific Revolution if we take seriously the interaction between practitioners those who know by doing and scholars those who know by thinking These are not in opposition however Theory and practice are end points on a continuum with some participants interested only in the practical others only in the theoretical and most in the murky intellectual and material world in between It is this borderland where influence appropriation and collaboration have the potential to lead to new methods new subjects of enquiry and new social structures of natural philosophy and science The case for connection between theory and practice can be most persuasively drawn in the area of mathematics which is the focus of this book Practical mathematics was a growing field in early modern Europe and these essays are organised into three parts which contribute to the debate about the role of mathematical practice in the Scientific Revolution First they demonstrate the variability of the identity of practical mathematicians and of the practices involved in their activities in early modern Europe Second readers are invited to consider what practical mathematics looked like and that although practical mathematical knowledge was transmitted and circulated in a wide variety of ways participants were able to recognize them all as practical mathematics Third the authors show how differences and nuances in practical mathematics typically depended on the different contexts in which it was practiced social cultural political and economic particularities matter Historians of science especially those interested in the Scientific Revolution period and the history of mathematics will find this book and its ground breaking approach of particular interest      Resources in Education,2001-04
