Early Childhood Education Petr G. Grotewell, Yanus R. Burton, 2008 This book focuses on early childhood education which spans the human life from birth to age 8 Infants and toddlers experience life more holistically than any other age group Social emotional cognitive language and physical lessons are not learned separately by very young children Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience not just that part of the experience to which the adult gives attention Although early childhood education does not have to occur in the absence of the parent or primary caregiver this term is sometimes used to denote education by someone other than these the parent or primary caregiver Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent Other terms that is often used interchangeably with early childhood education are early childhood learning early care and early education Much of the first two years of life are spent in the creation of a child's first sense of self or the building of a first identity Because this is a crucial part of children's makeup how they first see themselves how they think they should function how they expect others to function in relation to them early care must ensure that in addition to carefully selected and trained caregivers links with family home culture and home language are a central part of program policy If care becomes a substitute for rather than a support of family children may develop a less than positive sense of who they are and where they come from because of their child care experience

social work mathematics education and educational psychology *Engaging Families as Children's First Mathematics Educators* Sivanes Phillipson, Ann Gervasoni, Peter Sullivan, 2016-11-21 This book explores how professionals can engage and inspire parents to support their young children's mathematics learning. Bringing together international experts, researchers and scholars, it proposes a framework for engaging with and supporting parents, including those who are less aware of the crucial development of children's mathematical skills in the early years. Focusing on mathematics learning from birth to 5 years, the book's underlying assumption is that it is possible to offer guidance to professionals working with families with young children concerning how to engage and support families in the area of mathematics learning, including those families who seem alienated from education services. Specifically, the respective chapters present a framework for understanding children's early mathematical development and the important role of families in this regard. They describe effective strategies for engaging families in their children's mathematics learning, including those who are marginalised and experience multiple disadvantages, so that all families can best support their children's mathematical learning and their development of positive attitudes towards learning. In closing, hurdles and opportunities within the systems surrounding family engagement are addressed.

Iqra' Preschool Curriculum Tasneema Khatoon Ghazi, 1992 **Math at Their Own Pace** Greg Nelson, 2007-09-04 As a dedicated early childhood teacher, you aim to provide an environment where students make new discoveries and test their limits. But when it comes to teaching developmentally appropriate math, you might welcome help from an expert with teaching experience based on the latest research on math learning. *Math at Their Own Pace* offers a series of predesigned, inexpensive activities that you can create and place on the shelf for children to use when they are developmentally ready and interested. This child-directed approach provides a broad range of hands-on math experiences that will help your students learn to solve problems creatively. *Math at Their Own Pace* covers awareness of stable quantities and emergence of counting skills, recognizing and writing the numerals 0 through 9, counting to 10 and beyond, emergence of whole-part awareness. Greg Nelson, PhD, is a professor of early childhood education at Bridgewater State College in Bridgewater, Massachusetts, and has been a lead teacher in a Montessori program. He holds a PhD in educational psychology, human development, and cognition.

Contemporary Perspectives on Mathematics in Early Childhood Education Olivia Saracho, Bernard Spodek, 2008-02-01 This volume provides a comprehensive critical analysis of the research in mathematics education for young children. The researchers who conducted the critical analysis focused on the relationship between 1) mathematics learning in the early years and domain-specific approaches to cognitive development; 2) the children's social learning and their developing understanding of math; and 3) the children's learning in a natural context and their understanding of mathematics concepts. The work of these scholars can help guide those researchers who are interested in pursuing studies in early childhood mathematics in a specific area of study. This volume will facilitate the research conducted by both novice and expert researchers. The volume has accomplished its major goals, which consist of critically analyzing
