Handbook on the History of Mathematics Education Alexander Karp, Gert Schubring, 2014-01-25 This is the first comprehensive International Handbook on the History of Mathematics Education covering a wide spectrum of epochs and civilizations countries and cultures Until now much of the research into the rich and varied history of mathematics education has remained inaccessible to the vast majority of scholars not least because it has been written in the language and for readers of an individual country And yet a historical overview however brief has become an indispensable element of nearly every dissertation and scholarly article This

handbook provides for the first time a comprehensive and systematic aid for researchers around the world in finding the information they need about historical developments in mathematics education not only in their own countries but globally as well. Although written primarily for mathematics educators, this handbook will also be of interest to researchers of the history of education in general as well as specialists in cultural and even social history.

Ideas at the Intersection of Mathematics, Philosophy, and Theology Carlos R. Bovell, 2012-09-17 How do mathematics philosophy and theology intersect? In *Ideas at the Intersection of Mathematics Philosophy and Theology*, Carlos Bovell proposes a wide range of possibilities. In a series of eleven thought-provoking essays, the author explores such topics as the place of mathematics in the work of Husserl and Heidegger, the importance of infinity for the Christian conception of God, and the impact of Gödel's Theorem on the Westminster Confession of Faith. This book will appeal to readers with backgrounds in mathematics philosophy and theology and can be used in core interdisciplinary modules that contain a math component.

Didactics of Mathematics as a Scientific Discipline Rolf Biehler, Roland W. Scholz, Rudolf Sträßer, Bernard Winkelmann, 2006-04-11 *Didactics of Mathematics as a Scientific Discipline* describes the state of the art in a new branch of science. Starting from a general perspective on the didactics of mathematics, the 30 original contributions to the book, drawn from 10 different countries, go on to identify certain subdisciplines and suggest an overall structure or topology of the field. The book is divided into eight sections: 1. Preparing Mathematics for Students, 2. Teacher Education and Research on Teaching, 3. Interaction in the Classroom, 4. Technology and Mathematics Education, 5. Psychology of Mathematical Thinking, 6. Differential Didactics, 7. History and Epistemology of Mathematics and Mathematics Education, 8. Cultural Framing of Teaching and Learning. *Mathematics Didactics as a Scientific Discipline* is required reading for all researchers into the didactics of mathematics and contains surveys and a variety of stimulating reflections which make it extremely useful for mathematics educators and teacher trainers interested in the theory of their practice. Future and practising teachers of mathematics will find much to interest them in relation to their daily work, especially as it relates to the teaching of different age groups and ability ranges. The book is also recommended to researchers in neighbouring disciplines such as mathematics itself, general education, educational psychology, and cognitive science.

1395 E **Mathematical Modelling: From Theory To Practice** Ngan Hoe Lee, Kit Ee Dawn Ng, 2015-01-19 This book documents the journey undertaken by educators from the Mathematics and Mathematics Education (MME) Academic Group in the National Institute of Education (NIE) and Singapore schools during a Mathematical Modelling Outreach (MMO) event in June 2010 under the guidance of renowned experts in the field of mathematical modelling. The main goal of MMO was to reach out to Singapore primary and secondary schools and introduce the potentials of mathematical modelling as a platform

for eliciting mathematical thinking communication and reasoning among students This book contributes to the expanding literature on mathematical modelling by offering voices from the Singaporean context It suggests how theoretical perspectives on mathematical modelling can be transformed into actual practice in schools all within the existing infrastructure of the current Singapore mathematics curriculum More importantly the book provides documentary evidence on how plans put in place through MMO in 2010 have since been realised The publication of this book is hence timely at this juncture Not only does the book record how MMO was among the first pebbles launched into the pond it also serves as a bridge over which educators can stand upon to view how the ripple effect had developed from the initial MMO pebble and the directions it may continue to extend Perhaps in the process other ripples in the teaching learning and research of mathematical modelling can be created

Mathematical Applications and Modelling Berinderjeet Kaur, 2010 Mathematical Applications and Modelling is the second in the series of the yearbooks of the Association of Mathematics Educators in Singapore The book is unique as it addresses a focused theme on mathematics education The objective is to illustrate the diversity within the theme and present research that translates into classroom pedagogies
