**Mathematics and Science Achievement in the Final Year of Secondary School in Minnesota** Anthony D. Lutkus, Norma A. Norris, Mike Narcowich, Westat, Inc, Educational Testing Service, International Association for the Evaluation of Educational Achievement, 1998      **Secondary Analysis of the TIMSS Data** David F. Robitaille, Albert E. Beaton, 2005-12-19 Researchers who participate in IEA studies have a unique opportunity to work collaboratively with their counterparts from many different countries and disciplinary backgrounds over a period of several years on questions of shared academic interest Once the data for a given study have been collected and the first round of international reports published however opportunities for that kind of collaboration tend to be much less frequent A major strength of IEA studies compared to other large scale international studies is that they are classroom based thereby making it possible for researchers and policy makers to investigate linkages between students achievement and a wide range of variables Those variables could be related to instructional practices to students and teachers background and attitudes to school organizational patterns or to opportunity to learn to name a few The research questions that TIMSS was designed to address make it clear that these kinds of relational multi variate analyses were among the major goals of the project The international reports of the TIMSS 95 results that were published by the International Study Center at Boston College between 1996 and 1999 were intended to provide comprehensive coverage of the basic findings of the study They were not intended to provide in depth analyses of research and policy issues instead their main purpose was to make the basic findings of the study widely available in a timely manner This they certainly did      Mathematics and Science Achievement in the Final Year of Secondary School Ina V. S. Mullis, 1998 The Third International Mathematics and Science Study TIMSS covered five different grade levels with more than 40 countries collecting data in more than 30 different languages More than a million students were tested The present report contains the TIMSS results for students in the final year of secondary school Mathematics and science literacy achievement results are reported for 21 countries advanced mathematics results and physics results respectively are reported for 16 countries These results complete the first round of descriptive reports from the TIMSS study Together with the results for primary school students third and fourth grade in most countries and middle school students seventh and eighth grades in most countries the results contained in this report provide valuable information about the relative effectiveness of a country s education system as students progress through school A ten page Executive Summary details the extensive conclusions to be drawn from the study Dozens of tables and figures provide detailed statistics for all participating countries The Netherlands and Sweden were the top performing countries in mathematics France was the top performer in advanced mathematics Norway and Sweden had physics achievement levels significantly higher than other participating countries The appendixes contain extensive information pertaining to the development of the TIMSS tests sample sizes and participation rates compliance with sampling guidelines and the test curriculum matching analysis DDR
