Technologies and Related Methods of Nuclear Waste Management Gregory R. Choppin, Mikhail Kh.

Khankhasayev, 1999-02-28 Separation technologies are of crucial importance to the goal of significantly reducing the volume of high level nuclear waste thereby reducing the long term health risks to mankind International co operation including the sharing of concepts and methods as well as technology transfer is essential in accelerating research and development in the field The writers of this book are all internationally recognised experts in the field of separation technology well qualified to assess and criticize the current state of separation research as well as to identify future opportunities for the application of separation technologies to the solution of nuclear waste management problems The major emphases in the book are research opportunities in the utilization of innovative and potentially more efficient and cost effective processes for waste processing treatment actinide speciation separation methods technological processing and environmental restoration Monitoring

and Surveillance of Residues from the Mining and Milling of Uranium and Thorium International Atomic Energy Agency, 2002 The conventional mining and processing of uranium and thorium ore generates large amounts of waste This report contains technical information on the development of an effective monitoring and surveillance programme for residues of radioactive ores Issued considered include modes of potential release of contaminants from mill tailings and mine waste initial environmental surveys monitoring and surveillance programmes reporting and quality assurance *Nuclear Safety*, 1990
