**Radiation Protection in Pediatric Radiology** National Council on Radiation Protection and Measurements, 1981

**Medical Radiation Exposure of Pregnant and Potentially Pregnant Women** National Council on Radiation Protection and Measurements, 1977    *Dental X-ray Protection* National Council on Radiation Protection and Measurements, 1970 This report is concerned with both the design and operational aspects of dental x ray equipment and matters relating to structural shielding design Preface page iii    Radiation Protection for Medical and Allied Health Personnel National Council on Radiation Protection and Measurements, 1976 In hospital radiation facilities of all types safety procedures for protecting radiation workers and the general public must be carefully planned and supervised and controlled by a qualified staff member To meet currently accepted standards for protection the potential exposures of workers and anyone else in or near a radiation area are evaluated and precautions taken to avert the possibility of exceeding or even approaching the permissible radiation levels Radiation workers employed in these facilities are informed about these safety procedures However there are various individuals involved in the delivery of medical care or in research who are not usually categorized as radiation workers Their duties may occasionally take them into areas where radiation or radioactive materials are present For want of a better term we may group many of these individuals under the title of allied health personnel Among these are physicians nurses technicians and others who are not classified as radiation workers but who occasionally have to deal with radioactive materials or with patients who have received radiopharmaceuticals In addition there are others not directly involved in the care of patients or research who may incidentally be exposed to radiation in the course of their

work Such for instance are personnel in institutional shipping and receiving rooms and those engaged in hospital maintenance work Many of these people are concerned about radiation hazards and often suffer misconceptions regarding the subject They sometimes work without instruction or guidance Sometimes they seek out someone to ask questions about radiation and do receive from them careful answers to their questions Too often however they are simply told that everything is all right and that they have no cause to worry One purpose of this report is to note the types of problems encountered and try to give approaches to handling them The Radiation Protection Supervisor is usually aware of potential hazards within an institution but sometimes the problems are not evident even to him From Preface pages iii iv Radiation Protection in Veterinary Medicine National Council on Radiation Protection and Measurements,1970 this report is concerned with both the design and operational aspects of veterinary radiation equipment and matters relating to structural shielding design While much of this material is already contained in Reports 33 and 34 this report presents the pertinent information which is applicable to the veterinary use of radiation The NCRP believes that it is important for each radiation user in veterinary practice to be thoroughly familiar with the pertinent recommendations If these remained embedded in the more comprehensive recommendations covering the whole radiation field the availability of the information and the usefulness to the veterinarian would be somewhat limited This report is intended to serve as a guide to good practice It provides basic standards which may be used in the preparation of regulatory protection codes but is not specifically written for literal adoption as legal regulations From Preface pages iii iv *Applying Radiation Safety Standards in Diagnostic Radiology and Interventional Procedures Using X Rays* International Atomic Energy Agency,2006 The International Basic Safety Standards for Protection against Ionizing Radiation and for the Safety of Radiation Sources BSS establish requirements on the legal persons responsible for designing running and decommissioning practices involving ionizing radiation This report is intended to be of assistance to both regulators and users of radiation sources in diagnostic radiology and interventional procedures using X rays in applying the BSS to this practice Regulators will find it useful for reviewing applications for authorization and for inspection of the practice Users of radiation in radiology may follow the guidance provided in order to comply with BSS requirements or equivalent national requirements Experts recruited on IAEA missions to advise on the implementation of the BSS for the practice of diagnostic radiology and interventional procedures using X rays are expected to use this regulatory guidance report rather than their own national regulations and guidance **NCRP Report ,1990** *Legislative History of Radiation Control for Health and Safety Act of 1968: 1,001-2,000* United States.
