Lymphovascular System: Stanley P. L. Leong, 2007-09-05 Sentinel lymph node SLN procedures have opened a window of opportunity for the study of micrometastasis. In eighty percent 80% of metastasis there lies an orderly pattern of progression via the lymphatic network while 20% of the time systemic metastasis occurs bypassing the lymphatic system. During the past two decades significant progress has been achieved in understanding the anatomical, functional, cellular, and molecular aspects of the lymphovascular system and the metastasis process. Molecular imaging advances help to localize early cancers more precisely. Current status of the immune responses in the draining lymph nodes against cancer is summarized. New paradigms of early cancer growth, proliferation, overcoming apoptosis, are exploited in the development of anticancer treatment. In this book basic scientists and clinicians exchange ideas so that laboratory findings can be applied to clinical dilemmas and clinical problems can be targeted for research in the laboratory.
