Rails Barry Taylor, 2010-08-30 This is a guide to rails a relatively homogeneous family of birds spread throughout the world Barry Taylor and Ber van Perlo have described and illustrated 145 species of rails including two that are newly described and also ten that are recently extinct and two that are almost certainly extinct The book based on up to date references and on new observations is the first to give comprehensive information on field identification including voice covering all species and races for which details are known It is also the first to provide descriptions of the immature and juvenile plumages of many species The authors provide a detailed summary of current knowledge of all aspects of rail biology and their often complex behaviour social structure and family life They explain how such apparently poorly flying birds can undertake intercontinental migrations and are such widespread and successful colonists of remote oceanic islands They also discuss the remarkable ease and speed with which species on such islands have evolved into flightless forms in the absence of predators a fact that has led to the rapid extinction of numerous island taxa following the arrival of man Rail habitats are fast disappearing say the authors and many rails become endangered before enough is known about them to plan effective conservation measures The book provides information on distribution status habitat requirements and current threats and it gives conservation priorities for threatened species *Birds of Northern South America: An Identification Guide* Miguel Lentino, Robin Restall, Clemencia Rodner, 2020-01-23 Volume I of a comprehensive two part identification guide dealing exclusively with the birds of this region It covers all the species including vagrants found in Ecuador Columbia Venezuela Aruba Cura ao Bonaire Trinidad and Tobago Guyana Suriname and French Guiana More than 2 300 species are described in depth in the text describing geographical variation identification status habitat voice and taxonomy Detailed and comprehensive colour plates and distribution maps may be found in the second volume *Birds of Northern South America An Identification Guide Plates and Maps* This authoritative book will not only be an indispensable guide to the visiting birder but also a vital tool for those engaged in work to conserve and study the avifauna of this region which is of such importance to both the indigenous species and those which pass through on migration *Field Guide to Birds of the Horn of Africa* Nigel Redman, Terry Stevenson, John Fanshawe, 2010-06-30 This is the first field guide to the birds of this fascinating region and a companion to *Birds of East Africa* by two of the same authors The Horn of Africa has the highest endemism of any region in Africa and around 70 species are found nowhere else in the world Many of these are confined to the isolated highlands of Ethiopia and Eritrea but a large number of larks specialise in the arid parts of Somalia and adjoining eastern Ethiopia whilst the island of Socotra has its own suite of endemic species The region is also an important migration route and wintering site for many Palearctic birds Over 200 magnificent plates by John Gale and Brian Small illustrate every species that has ever occurred in the five countries covered by the guide and the succinct text covers the key identification criteria Special attention is paid to the voices of the species and over 1000 up to date colour distribution maps are included This long awaited
