Thomas P. Peschak,2014-02-27 At once feared and revered sharks have captivated people since our earliest human encounters Children and adults alike stand awed before aquarium shark tanks fascinated by the giant teeth and unnerving eyes And no swim in the ocean is undertaken without a slight shiver of anxiety about the very real and very cinematic dangers of shark bites But our interactions with sharks are not entirely one sided the threats we pose to sharks through fisheries organized hunts and gill nets on coastlines are more deadly and far reaching than any bite In *Sharks and People* acclaimed wildlife photographer Thomas Peschak presents stunning photographs that capture the relationship between people and sharks around the globe A contributing photographer to National Geographic Peschak is best known for his unusual photographs of sharks his iconic image of a great white shark following a researcher in a small yellow kayak is one of the most recognizable shark photographs in the world The other images gathered here are no less riveting bringing us as close as possible to sharks in the wild Alongside the photographs *Sharks and People* tells the compelling story of the natural history of sharks Sharks have roamed the oceans for more than four hundred million years and in this time they have never stopped adapting to the ever changing world their unique cartilage skeletons and array of super senses mark them as one of the most evolved groups of animals Scientists have recently discovered that sharks play an important role in balancing the ocean including maintaining the health of coral reefs Yet tens of millions of sharks are killed every year just to fill the demand for shark fin soup alone Today more than sixty species of sharks including hammerhead mako and oceanic white tip sharks are listed as vulnerable or in danger of extinction The need to understand the significant part sharks play in the oceanic ecosystem has never been so urgent and Peschak s photographs bear witness to the thrilling strength and unique attraction of sharks They are certain to enthrall and inspire *Encyclopedia of Modern Coral Reefs* David

Hopley,2010-11-26 Coral reefs are the largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology geography and ecology providing comprehensive access to the most up to date research on the structure form and processes operating on Quaternary coral reefs *Vertebrates in Complex Tropical Systems* Mireille L.

Harmelin-Vivien, Francois Bourliere, 2012-12-06 This book addresses the question of what determines species richness in tropical animals by comparing and contrasting the communities of the five major classes of vertebrates in two environments considered to be the most species rich on Planet Earth the coral reef and the rainforest All the contributors were asked to examine how so many species could coexist in such communities and to discuss the ways species assemblages might have evolved over time Because the coauthors are ecologists emphasis is quite naturally placed on the first of these two questions and the factors contributing to the maintenance of a diversity are discussed at length However the question of the very origin of species richness can never be eluded though it is more an evolutionary problem than an ecological one it has therefore also been given some attention occasionally Since we believe that long term descriptive data and extended field experience are absolutely essential to formulate meaningful questions and propose realistic models contributors were selected on the basis of their prolonged field practice all of them actually spent years in the field and or participated in long term research programs The present volume has its origin in a symposium held on August 15 1986 at Syracuse New York during the Fourth International Congress of Ecology Global Climate Change and Coral Reefs Clive R. Wilkinson, Robert W. Buddemeier, UNEP-IOC-ASPEI-IUCN Global Task Team on the Implications of Climate Change on Coral Reefs, 1994 A global overview of the potential impacts of climate change and sea level rise on coral reefs and of the implications of such impacts for ecological sustainable use of coral reefs Includes information on the status and trends of reef conservation and use around the world and suggestions for management of reefs in a changing world **Plastiki** David de Rothschild, 2011-03-16 Explorer global green leader and eco TV host David de Rothschild recounts the extraordinary journey of the Plastiki an innovative and mostly untested sixty foot catamaran that floats on 12 500 reclaimed plastic bottles It was a voyage that took de Rothschild and a five person crew 10 000 miles from the U S to Australia sailing through rarely traveled dangerous waters risking their lives to call attention to our fragile oceans Their exploration included urgent study of ocean pollution island nations threatened by rising seas damaged coral reefs and the acidifying ocean itself and their discoveries are a call to action Packed with exciting narrative images maps journal entries plans and sketches this is the only firsthand account of what may be the most important adventure of our time Global Megatrends Stefan Hajkowitz, 2015-05-01 A scarcity of natural resources The challenge to protect biodiversity and the global climate Rapid economic growth and urbanisation in Asia and the developing world Changing demographics and an ageing population The impact of new digital technologies Consumer expectations for services experiences and social interaction An imperative to innovate Megatrends are gradual yet powerful trajectories of change that have the potential to throw companies individuals and societies into freefall In *Global Megatrends* author Stefan Hajkowitz identifies these seven patterns of global change and tells a story about how the world will change over the next 20 years The book captures the thinking of many dedicated scientists and researchers who have devoted their careers to exploring and understanding change The change heralded by megatrends lies beyond our direct control but not

beyond our influence By getting a picture of how the world is changing and what these megatrends are we can alter our destiny
