The Real-Time Enterprise Dimitris N. Chorafas, 2004-11-15 Successful management teams can identify the cost and return derived from the implementation of new technology and they can properly apply the technology toward gaining a competitive advantage IT and business managers alike need a resource that enables them to prepare for future operating conditions identify beneficial solutions and use high te

The Practical Real-Time Enterprise Bernd Kuglin, Heinz Thielmann, 2005-08-15 Speed as a factor for success Our modern industrial society lives life in the fast lane The catchwords faster shorter more powerful reflect what we experience in almost all aspects of our lives Whether at home or at work we are constantly on the move and in a rush In our private lives we find rapid exchange of inf mation most entertaining and we are fascinated by the wide range of inf mation that pours in on us from all around the world mainly via the new media It gives us the feeling of being a part of the action everywhere and all the time Seldom are we aware that the only reason this flood of inf mation often referred to as overstimulation does not lead to overkill is that we manage to organize our time effectively There are many parallels to this in the business world Here too a great deal of time pressure is exerted from outside goals are set ever higher and deadlines become tighter In other words demands on our time demand faster reaction Crucial information travels around the globe across all time zones in a matter of seconds In fact instead of CET or CEST it would make sense to have a single time zone for the worldwide network called GST for Global Simultaneous Time In business more so than in p vate life we are almost constantly online

The Concept of a Real-Time Enterprise in Manufacturing Daniel Metz, 2013-10-01 Enterprises have to react instantly to changing market conditions and disturbances that occur during execution of value creation processes Depending upon the processes context the goal is to significantly reduce lead times reaction times and time to market among others The vision of a real time enterprise RTE which is able to sense and analyze events from internal and external sources and perform adequate re actions has been envisaged by manufacturing enterprises Daniel Metz presents a framework based on EDA and CEP towards the realization of RTE in manufacturing The framework closes the vertical integration gap and further establishes feedback in near real time among enterprise levels As such the framework provides a holistic and closed loop control of manufacturing processes and encompasses results and insights from management engineering and computer science The framework has been implemented for a small and medium sized foundry in Germany The developed control approach has led to a significant increase in manufacturing processes efficiency i e performance quality and availability

Business Intelligence for the Real-Time Enterprise Malu Castellanos, Umeshwar Dayal, Timos Sellis, 2009-08-03 In today s competitive and highly dynamic environment analyzing data to understand how the business is performing to predict outcomes and trends and to improve the effectiveness of business processes underlying business operations has become cri cal The traditional approach to reporting is no longer adequate users now demand easy to use intelligent platforms and applications capable of analyzing real time bu ness data to provide insight and actionable

information at the right time The end goal is to improve the enterprise performance by better and timelier decision making enabled by the availability of up to date high quality information As a response the notion of real time enterprise has emerged and is beginning to be recognized in the industry Gartner defines it as using up to date information getting rid of delays and using speed for competitive advantage is what the real time enterprise is all about Indeed the goal of the real time enterprise is to act on events as they happen Although there has been progress in this direction and many companies are introducing products toward making this vision a reality there is still a long way to go In particular the whole lifecycle of business intelligence requires new techniques and methodologies capable of dealing with the new requirements imposed by the real time enterprise

Becoming A Real Time Enterprise Tabrizi, 2007-03 Real time enterprise RTE refers to the seamless fusion of IT and business operations to foster event driven marketing process automation just in time provisioning and readily available business intelligence By ensuring that the right information flows to the right people at the right time RTE allows companies superior efficiency and quicker response time to both problems and opportunities Drawing on five years of research at more than 30 leading companies *Becoming a Real Time Enterprise* fills a gaping hole in the business literature by bringing RTE down to earth for business readers and providing a complete blueprint for achieving real time status

CRM in Real Time Barton J. Goldenberg, 2008 This comprehensive guide to Customer Relationship Management CRM draws on Barton Goldenbergs 20 plus years of experience guiding firms to a successful implementation of CRM solutions and techniques Goldenberg demonstrates how the right mix of people process and technology can help firms achieve a superior level of customer satisfaction loyalty and new business Beginning with a primer for executives who need to get quickly up to speed on CRM the book covers a full range of critical issues including integration challenges and security concerns and illuminates CRMs key role in the 24/7/365 real time business revolution CRM in Real Time is an essential guide for any organization seeking to maximize customer relationships coordinate customer facing functions and leverage the power of the Internet as business goes real time

The Concept of a Real-Time Enterprise in Manufacturing Daniel Metz, 2013-11-27 Enterprises have to react instantly to changing market conditions and disturbances that occur during execution of value creation processes Depending upon the processes context the goal is to significantly reduce lead times reaction times and time to market among others The vision of a real time enterprise RTE which is able to sense and analyze events from internal and external sources and perform adequate reactions has been envisaged by manufacturing enterprises Daniel Metz presents a framework based on EDA and CEP towards the realization of RTE in manufacturing The framework closes the vertical integration gap and further establishes feedback in near real time

among enterprise levels. As such, the framework provides a holistic and closed loop control of manufacturing processes and encompasses results and insights from management engineering and computer science. The framework has been implemented for a small and medium sized foundry in Germany. The developed control approach has led to a significant increase in manufacturing processes efficiency i.e. performance, quality and availability. *The Practical Real-Time Enterprise* Bernd Kuglin, 2005-02-21. The basic idea of the real time enterprise is to become quicker. A business which wants to become a real time enterprise has to acquire three main abilities. Internal and external data is integrated quickly and in real time in a well organized company data pool. Analyses of information in the company data pool can be obtained in real time across function boundaries and at the touch of a button. The number of working steps performed in batch mode is shifting dramatically in favor of immediate completion in real time. The issue of communications or real time communications plays a special role here. Studies have shown that processing times sometimes double when necessary communication events are handled in batch mode in the business process and not in real time. In other words, when an activity cannot be completed and lies around for days because an urgently needed partner cannot be contacted. The necessity of acquiring these three abilities has implications for the process related technical and organizational aspects of a business that are dealt with in detail in this book. **Enabling Real-Time Business Intelligence** Malu Castellanos, Umeshwar Dayal, Renée J. Miller, 2010-07-23. In today's competitive and highly dynamic environment, organizations need new solutions to enable them to solve modern business problems and to make decisions using integrated, trustworthy and up to date data. Modern real time enterprises need to act on events as they happen. They need new, easy to use, intelligent solutions capable of analyzing heterogeneous real time enterprise data to provide insight and actionable information at the right time. To enable real time enterprises, we need fundamental advancements in the science and engineering that underlie intelligent information management, including the management of streaming data, the modeling analysis and management of unstructured data along with the integrated use of unstructured, semi-structured and structured data. We need new models and paradigms that raise the level of abstraction used in such critical technologies as ETL, data warehousing and event and business process modeling. The series of BIRTE workshops aims to provide a forum to discuss and advance the foundational science and engineering required to enable real time business intelligence and the novel applications and solutions that build on these foundational techniques. Following the success of our first workshop BIRTE 2006 held in Seoul, Korea, in conjunction with VLDB 2006 and our second workshop BIRTE 2008 held in Auckland, New Zealand, with VLDB 2008, our third workshop was held in Lyon, France, on August 24, 2009, with VLDB 2009.
