Real-Time Software Design HELLER,2013-11-11 Computers these days spend a fairly low fraction of their time computing In fact the very word computer has become something of a misnomer In the American History museum of the Smithsonian Institute in Washington D C there is an exhibit of early computers Three features of these machines are striking First they are enormous especially in comparison to their capabilities The museum visitor who has just come from the Natural History building next door may be reminded of fossilized dinosaur bones Second they don't look at all like modern computing machines The cases are made of crude metal or beautifully worked wood recalling an approach to the design of scientific apparatus which belongs to a previous generation Lastly the function of these machines is mainly to compute to perform rapid arithmetic The computer of today bears little resemblance in size form or function to its ancestors It is most obviously smaller by several orders of magnitude Its form has changed from the carefully crafted one of a kind instrument to the mass produced microchip But the change in its function is perhaps the most dramatic of all Instead of being a computing engine it is a machine for the processing of information The word processor has come into common usage A processor used to be a central processing unit a set of wires and vacuum tubes or later a set of printed circuit boards which was nestled deep within the computer Today a processor is an off the shelf component

British Universities' Guide to Graduate Study ,1993 *Embedded Microprocessor Systems* Christian Müller-Schloer,1996

Embedded microprocessor systems are affecting our daily lives at a fast pace mostly unrecognised by the general public Most of us are aware of the part they are playing in increasing business efficiency through office applications such as personal computers printers and copiers Only a few people however fully appreciate the growing role of embedded systems in telecommunications and industrial environments or even in everyday products like cars and home appliances The challenge

to engineers and managers is not only highlighted by the sheer size of the market 1.5 billion microcontrollers and microprocessors are produced every year but also by the accelerating innovation in embedded systems towards higher complexity in hardware software and tools as well as towards higher performance and lower consumption To maintain competitiveness in this demanding environment an optimum mix of innovation time to market and system cost is required Choosing the right options and strategies for products and companies is crucial and rarely obvious In this book the editors have therefore skilfully brought together more than fifty contributions from some of the leading authorities in embedded systems The papers are conveniently grouped in four sections
