Recent Advances in Odor Richard Louis Kuehner, New York Academy of Sciences, American Society of Heating, Refrigerating and Air-Conditioning Engineers, Society of Cosmetic Chemists (U.S.), 1964 **Recent Advances in Odor** Richard L. Kuehner, 1964 **Recent Advances in Odor: Theory, Measurement, and Control**, Olfaction and Odours W. McCartney, 2012-12-06 If we possessed a true well established and undoubted theory concerning the function of the nerves in the human body the principles of smell would be much easier to understand So far we do not know for certain whether the action of nerves takes place by means of a subtle fluid which is instantaneously conveyed from the beginning of the nerves to their ends or whether as some think some sort of vibratory movements is produced in them or whether the stimulation should be considered as the only sufficient cause to say nothing of the new opinion concerning the electrical force Linnaeus Although much has been learned since the time of Linnaeus it is still true that we do not yet possess a true well established and undoubted theory of olfaction The literature of the subject however has long been rather voluminous the frequent assertions to the contrary are simply untrue and is now growing rapidly Moreover quite a number of symposia on olfaction or olfaction and taste have been held during recent years For example in the U S A *Smellosophy* A. S. Barwich, 2020-07-14 For decades neuroscientists understood sensory perception as a matter of external stimuli sparking regions of the brain But this view has a key flaw odors don t line up consistently with the neural map A S Barwich explores the new science of smell and urges us to rethink theories of mind and brain inspired by the mapping model *Human Responses to Environmental Odors* Amos Turk, 2013-04-19 Human Responses to Environmental Odors presents some of the approaches to the study of the human olfactory response This book contains 11 chapters that describe the complexity in human olfaction This text deals first with the sensory and physicochemical aspects of odor These topics are followed by discussions on the sampling transport dispersal odor intensities and preferences and psychophysical scaling The discussion then shifts to the applications of some previously slighted fundamentals such as vapor pressure phenomena and the chemical stability of odorants in the atmosphere Other chapters are devoted to community odor problems and annoyance reactions combustion odors and laser Raman spectroscopy These chapters include odor measurement and control This book is of great value to flavor scientists chemists physiologists and behavioral scientists **Recent Advances in Odor: Theory, Measurement, and Control**, 1964 **Recent Advances in Odor** Richard L. Kuehner, 1964 *Biology of Perceptual Systems* Edward Carterette, 2012-12-02 Handbook of Perception Volume III Biology of Perceptual Systems reviews the literature on the biological aspects of human perception with emphasis on perceptual systems and elements of sensory physiology This volume is organized into 19 chapters and begins with a discussion of energy transduction detection and discrimination along with the properties of neurons alone and as conjoined in nets The focus then shifts to psychogenesis the relatively new field of ethology and the natural diversity and evolutionary divergence of sensory systems The chapters that

follow examine the genetics of behavior the facts and theories about the way in which animals and men construct patterned stimulation of receptors into significant objects and the structure and function of sensory systems on which vertebrates depend for their construction of the varieties of experience The book methodically introduces the reader to chemoreception tasting and smelling cutaneous mechanoreception of position velocity transients active texture perception mechanisms of spatial orientation and of motion in space thermoreception vision and audition In almost every case the underlying physiological mechanisms are related to the psychophysical or perceptual observations This book is a valuable resource for psychologists biologists and natural scientists as well as for those who are interested in the biology of human perception
