Metadata For Information Management And Retrieval Hardcover:

Metadata for Information Management and Retrieval David Haynes, 2004 What is metadata and what do I need to know about it These are two key questions for the information professional operating in the digital age as more and more information resources are available in electronic format This is a thought provoking introduction to metadata written by one of its leading advocates It assesses the current theory and practice of metadata and examines key developments including global initiatives and multilingual issues in terms of both policy and technology Subjects discussed include What is metadata definitions and concepts Retrieval environments web library catalogues documents and records management GIS e Learning Using metadata to enhance retrieval pointing to content subject retrieval language control and indexing Information management issues interoperability information security authority control authentication and legal admissibility of evidence records management and document lifecycle preservation issues Application of metadata to information management document and records management content management systems for the internet Managing metadata how to develop a schema Standards development Dublin Core UK Government metadata standards eGIF IFLA FRBR Model for cataloguing resources Looking forward the semantic web the Web Ontology Working Group Readership This book will be essential reading for network oriented librarians and information workers in all sectors and for LIS students In addition it will provide useful background reading for computer staff supporting information services Publishers policy makers and practitioners in other curatorial traditions such as museums work or archiving will also find much of relevance *Metadata for Information Management and Retrieval* David Haynes, 2018-01-09 This new and updated second edition of a classic text provides a thought provoking introduction to metadata for all library and information students and professionals Metadata for Information Management and Retrieval has been fully revised to bring it up to date with new technologies and standards It builds on the concept of metadata through an exploration of its purposes and uses as well as considering the main aspects of metadata management This new edition containing new chapters on Very Large Data Collections and the Politics and Ethics of Metadata assesses the current theory and practice of metadata and examines key developments in terms of both policy and technology Coverage includes defining describing and expressing metadata data modelling metadata and information retrieval big data linked data and social media research data collections and open data repositories metadata in information governance compliance risk and information security managing intellectual property rights the politics of metadata ethics power and money This book is essential reading for library and information students at undergraduate and postgraduate level and will also be useful reading for LIS professionals looking for an accessible introduction to metadata *Computers in Libraries*, 2004 *Advances in Visual Information Management* Hiroshi Arisawa, Tiziana Catarci, 2013-03-20 Video segmentation is the most fundamental process for appropriate indexing and retrieval of video intervals In general video streams are composed 1 of shots delimited by physical shot boundaries Substantial work has been done on how to detect

such shot boundaries automatically Arman et al 1993 Zhang et al 1993 Zhang et al 1995 Kobla et al 1997 Through the integration of technologies such as image processing speech character recognition and natural language understanding keywords can be extracted and associated with these shots for indexing Wactlar et al 1996 A single shot however rarely carries enough amount of information to be meaningful by itself Usually it is a semantically meaningful interval that most users are interested in retrieving Generally such meaningful intervals span several consecutive shots There hardly exists any efficient and reliable technique either automatic or manual to identify all semantically meaningful intervals within a video stream Works by Smith and Davenport 1992 Oomoto and Tanaka 1993 Weiss et al 1995 Hjelsvold et al 1996 suggest manually defining all such intervals in the database in advance However even an hour long video may have an indefinite number of meaningful intervals Moreover video data is multi interpretative Therefore given a query what is a meaningful interval to an annotator may not be meaningful to the user who issues the query In practice manual indexing of meaningful intervals is labour intensive and inadequate
