Crane,Kaj Raunsgaard Pedersen,2011-08-18 The recent discovery of diverse fossil flowers and floral organs in Cretaceous strata has

revealed astonishing details about the structural and systematic diversity of early angiosperms Exploring the rich fossil record that has accumulated over the last three decades this is a unique study of the evolutionary history of flowering plants from their earliest phases in obscurity to their dominance in modern vegetation The discussion provides comprehensive biological and geological background information before moving on to summarise the fossil record in detail Including previously unpublished results based on research into Early and Late Cretaceous fossil floras from Europe and North America the authors draw on direct palaeontological evidence of the pattern of angiosperm evolution through time Synthesising palaeobotanical data with information from living plants this unique book explores the latest research in the field highlighting connections with phylogenetic systematics structure and the biology of extant angiosperms Canadian Journal of Botany ,1997 Indian Pandanaceae - an overview Altafhusain Nadaf,Rahul Zanan,2013-02-17 Indian screw pine family Pandanaceae represents three genera in which genus Pandanus and Benstonea are distributed in two hotspots in India the Western Ghats and the Northeast Himalayan region For the first time Indian Pandanaceae has been assessed for its taxonomic status and phylogenetic relationship The extensive survey by the authors led to the discovery of three new Pandanus species two from the Western Ghats and one from the Northeast Himalaya The present taxonomic revision confirmed total number of Pandanus species to 14 that are distributed in the Southern India 9 species and Northeast Himalayan region 5 species Genus Benstonea is represented by two species one from Southern India and another species common to both regions A detailed species identification key is given along with conservation status of each species following IUCN Red List Categories and Criteria 2001 The study revealed that out of 16 Pandanus and Benstonea species six species are under threatened categories In recent years a chloroplast DNA based molecular phylogenetic approach has been followed to understand the evolutionary relationship among the plant species The interrelationship among the 14 Pandanus species at infrageneric level has been worked out using this approach which has led to the rearrangement of some species to the subgenera proposed by Stone 1974 Moreover the close relationship between Pandanus and Benstonea has been confirmed and the interrelationship of Indian Pandanus genus in global context is given This book also describes the economic importance of each Pandanus species
