Cooper, Jr, Daniel T. Blumstein, 2015-05-28 When a predator attacks prey are faced with a series of if when and how escape decisions these critical questions are the foci of this book Cooper and Blumstein bring together a balance of theory and empirical research to summarise over fifty years of scattered research and benchmark current thinking in the rapidly expanding literature on the behavioural ecology of escaping The book consolidates current and new behaviour models with taxonomically divided empirical chapters that demonstrate the application of escape theory to different groups The chapters integrate behaviour with physiology genetics and evolution to lead the reader through the complex decisions faced by prey during a predator attack examining how these decisions interact with life history and individual variation.
