Strategies and methods for implementing CE in construction activities in the Nordic countries:

supporting cases Wahlström, Margareta, zu Castell-Rüdenhausen, Malin, Fruergaard Astrup, Thilde, Oberender, Anke, Jensen, Carl, Johansson, Pernilla, Wærner, Eirik, 2021-04-12 Available online <https://pub.norden.org/temanord2021/508>

The national strategies for a circular economy set the overall targets for implementation of circular economy in the country. Putting theory into practice via local strategies can be a good means for the transition towards a circular economy in the construction sector. Municipalities can set demands for CE solutions by requiring e.g. the use of recycled and/or recyclable construction materials, the application of design for disassembly principles in construction and requiring resource mapping and reuse and recycling in the demolition phase. The study identifies and presents cases and experiences from the implementation of CE concepts at the local level in the Nordic communities with a focus on construction renovation and demolition. Barriers and drivers for the uptake of CE solutions are analysed and enabling factors that could support the implementation of circular economy concepts and identified barriers in norms, legislation and guidelines are described. As part of the project, the project group gave 10 policy recommendations.

Barry's Advanced Construction of Buildings Stephen Emmitt, 2018-10-05. The updated edition of the authoritative and comprehensive guide to construction practice. The revised fourth edition of Barry's Advanced Construction of Buildings expands on the resource that has become a standard text on the construction of buildings. The fourth edition covers the construction of larger scale buildings, primarily residential, commercial and industrial, constructed with load bearing frames in timber, concrete and steel, supported by chapters on offsite construction, piling, envelopes to framed buildings, fit out and second fix lifts and escalators, building pathology, upgrading and demolition. The author covers the functional and performance requirements of the main building elements as well as building efficiency and information on meeting the challenges of limiting the environmental impact of buildings. Each chapter includes new at a glance summaries that introduce the basic material, giving a good understanding of the main points quickly and easily. The text is fully up to date with the latest building regulations and construction technology. This important resource covers design, technology, offsite construction, site assembly and environmental issues of larger scale buildings, including primarily residential, commercial and industrial buildings constructed with load bearing frames. Highlights the concept of building efficiency with better integration of the topics throughout the text. Offers new at a glance summaries at the beginning of each chapter. Is a companion to Barry's Introduction to Construction of Buildings, fourth edition. Written for undergraduate students and those working towards similar NQF level 5 and 6 qualifications in building and construction. Barry's Advanced Construction of Buildings is a practical and highly illustrated guide to construction practice. It covers the materials and technologies involved in constructing larger scale buildings.

Portugal SB07. Sustainable Construction, Materials and Practices Luis Bragança, Manuel D. Pinheiro, Said Jalali, Ricardo Mateus, Rogério

Amoêda, Manuel Correia Guedes, 2007-08-15 The construction industry is a vibrant and active industry The building sector is responsible for creating modifying and improving the living environment of humanity On the other hand construction and buildings have considerable environmental impacts consuming a significant proportion of limited resources of the planet including energy raw material water and land Therefore the sustainability of the built environment the construction industry and the related activities is a pressing issue facing all stakeholders in order to promote Sustainable Development The new millennium is challenging practitioners and researchers with the sustainability of the built environment and the construction industry Hence the main purpose of this publication is to discuss these challenges and present solutions that actively facilitate and promote the adoption of policies methods and tools to accelerate the movement towards a global sustainable built environment The issues presented include Building sustainability assessment tools Indoor environment quality and benchmarks Sustainable resources and materials use Use of non conventional materials Use of industrial waste Eco materials and technologies Sustainable management of existing building stock Innovative sustainable construction systems and Design

Barry's Construction Technology Stephen Emmitt, Tony Bryan, 2025-08-05 Updated resource guiding readers through the analysis and choices required to ensure a building will perform as expected Robin Barry's Construction of Buildings was first published in 1958 as a five volume set and rapidly became a standard work on the subject Following Barry's death in 2002 a two volume format was adopted with new authors Developed from an earlier book by Tony Bryan this new third volume Barry's Construction Technology extends the coverage to show how decisions about the design production maintenance and disposal of buildings may be thought through given the materials and technology available The book challenges the reader to think about the consequences of making choices and decisions rather than relying on using what has been used before Barry's Construction Technology Analysis and Choice includes information on The climate emergency and the low carbon agenda as a fundamental part of construction technology analysis and choice Regenerative design net zero buildings and the circular economy for the built environment Constraints that location legislation codes and standards sustainability insurance and commercial pressures apply to the performance of buildings Specific construction technology examples with emphasis on questioning what we do and why with the aim of informing and stimulating the reader to ask questions when confronted with all design and construction projects Barry's Construction Technology Analysis and Choice is an essential practical and up to date reference for undergraduate students of all building construction programmes including surveying construction management architectural technology and architecture

Construction, Demolition and Disaster Waste Management Erik K. Lauritzen, 2018-09-03 Construction and Demolition Waste CDW from the construction maintenance renovation and demolition of buildings and structures represents a large proportion of the waste in industrialized societies Compared to other forms such as household waste more than 90% of CDW can be used as a resource and a substitute for construction materials especially for primary natural raw materials Reuse recovery and recycling

depends on the quality and market for the materials and the environmental impact of the processes for conversion of CDW from old structures to its use in new structures However the utilization today of CDW products as secondary resources is marginal Most CDW is deposited or used as fill material and the opportunities of high quality recycling are generally neglected This book presents the opportunities for the sustainable and resource efficient utilisation of CDW focusing on recycling of concrete and masonry as the major forms of CDW The recycling of gypsum timber mineral wool asphalt and other types are also described Its aim is to present a chain of value and material streams in the transformation of obsolete buildings and structures into new buildings and structures It takes a holistic view focusing on the lifecycle economy the circular economy and integrated management aspects of various scenarios ranging from high industrial urban renewal to debris removal and management after disasters and conflicts It is based on the author s 35 years of research and development combined with practical international experience within the demolition and recycling area It addresses students architects civil engineers building owners public authorities and others working in urban planning demolition and resource management in the building and construction sector and in the reconstruction of damaged buildings after disasters and wars

Wood and Wood-Based Materials for Building Peter Niemz,Dick Sandberg,2025-10-28 Wood and wood based materials are taking centre stage in contemporary architecture from striking multi storey structures to innovative urban designs Understanding their properties is essential to avoid costly mistakes and to apply standards such as Eurocode 5 with confidence This book offers a clear practical overview of the key physical and mechanical characteristics of major wood species and wood based products including moisture behaviour elasticity creep and strength It also addresses crucial topics such as protection fire performance bonding and non destructive monitoring of timber structures Whether you are an architect civil engineer or a professional in the wood industry this is your go to reference for designing and building with timber It is equally valuable as an introduction for mechanical engineers chemists automation specialists and vocational students entering the field
