Struhsaker, 1975 **The Red Colobus Monkeys** Thomas T.

Struhsaker, 2010-04-01 Based on field studies spanning nearly 40 years this reference book summarizes and integrates past research with new and previously unpublished information on the behavioral ecology of Africa s red colobus monkeys from study sites as diverse as Senegal Uganda and Zanzibar It provides an unparalleled compilation of information on taxonomy genetics vocalizations demography social organization dispersal social behavior reproduction mortality factors diet ranging patterns interspecific relations and conservation Social relationships in red colobus are less rigidly structured than in other African monkeys resulting in considerable variation in social organization and group composition both within and between taxa This provides a unique opportunity to examine the extent to which social variables correlate with differences in habitat quality demography and predation by chimpanzees and humans Unfortunately at least half of the 18 taxa of red colobus are now threatened with extinction Conservation problems are described causal factors identified and solutions proposed This volume is intended not only to serve as a reference book but to stimulate and guide future long term research and to encourage effective conservation action **Feeding and Population Ecology of Red Colobus Monkey Korup NP**

Cameroon Usongo Leonard, 2016-12-15 *Feeding and Ranging Behaviour of the Red Colobus Monkey* T. H.

Clutton-Brock, 1972 **International Wildlife Encyclopedia** Maurice Burton, Robert Burton, 2002 This twenty two volume set presents the appearance and behavior of thousands of species of animals along with species population and prospects for survival in a arranged alphabetically and easy to read format *The Chimpanzees of the Tai Forest* Christophe

Boesch, Hedwige Boesch-Achermann, 2000 The chimpanzees are the closest living evolutionary relatives to our own species *Homo sapiens*. As such they have long exerted a fascination over those with an interest in human evolution and what makes humans unique. Christophe Boesch and Hedwige Boesch-Achermann undertook an incredible observational study of a group of wild chimpanzees of the Tai forest in Cote D'Ivoire spending some fifteen years in the West African jungle with them. This fascinating book is the result of these years of painstaking research among the chimps. Chimpanzee behavior is documented here in all its impressive diversity and variety. Aggression, territoriality, social structure and relationships, reproductive strategies, hunting tool use: each of these is given its own chapter along with topics such as chimp intelligence, life histories and demography. The authors take care to place their observations within the broader context of research in behavioral ecology and to compare and contrast their findings with other important work on chimpanzee groups such as that by Jane Goodall. The book concludes with a summary chapter relating the chimpanzee findings to our understanding of human evolution. Combining careful scientific observation with a store of entertaining anecdotes, this is a lively and readable book. It also succeeds in shedding light on some of the central questions around the evolutionary relationships between the primates and in particular the affinity between chimpanzees and humans. This is a major contribution to the study of the great apes and a significant addition to debates about human ape evolution. It has all the makings of a classic monograph. *Primate Adaptation and Evolution* Bozzano G. Luisa, 2013-10-22 *Primate Adaptation and Evolution* is the only recent text published in this rapidly progressing field. It provides you with an extensive current survey of the order Primates both living and fossil. By combining information on primate anatomy, ecology and behavior with the primate fossil record, this book enables students to study primates from all epochs as a single viable group. It surveys major primate radiations throughout 65 million years and provides equal treatment of both living and extinct species. Presents a summary of the primate fossils. Reviews primate evolution. Provides an introduction to the primate anatomy. Discusses the features that distinguish the living groups of primates. Summarizes recent work on primate ecology. Primate Males Peter M. Kappeler, 2000-05-04 The size and composition of primate groups varies tremendously across species, within species and within groups over time. The most variable quantity is the number of adult males. In some groups, single males can monopolize access to several females, whereas reproduction is shared among several males in other groups. This variation lies at the heart of understanding adaptive variation among social systems. Whether groups contain single or multiple males has important consequences for reproductive strategies of both sexes and also shapes these animals' morphology and behaviour. Written by leading authorities, this book provides an extensive overview of variation in group composition across all major primate taxa using up-to-date reviews, case studies, evolutionary theory and theoretical models, setting primates into context with birds and other mammals. It will become a firm favorite with all those interested in the behavioural ecology of primates.
