Redefining Sustainable Development Neil Middleton, Philip O'Keefe, 2001 A critical account of the politics of aid giving

*Redefining Sustainable Development* Neil Middleton, Phil O'Keefe, 2001-03-20 Development and assistance in disasters is about helping people to help themselves It is to do with facilitating sustainable livelihoods and addressing the ills of social discrimination These seem to be self evident propositions In fact they are a minefield If development workers intervene to assist in the creation of environmentally sustainable livelihoods what judgemental codes are contained in the everyday cultural and linguistic assumptions of development practitioners What account do they give of the environment and people s relationship to it If livelihoods are to be economically sustainable by which economic criteria is the judgement made Is the objective to keep projects going until the funds run out or like cancer patients to survive for five years or to knit people into the world s trading systems If projects are to be sustainable they must be socially just By whose justice do we judge At present much development and disaster relief work derives its importance solely from providing opportunities for honing survival skills The authors of this book examine these questions and others in detail and argue that the assumptions of the social democratic world including those of international NGOs are tied to the perpetuation of capitalism Neil Middleton and Phil O Keefe suggest that the issue in the face of anarchic global financial power is to rethink the nature of class in a late capitalist world and to recognise indigenous NGOs as the new political vehicles for its struggle

**Making Development Sustainable** Johan Holmberg, 1992-09 Although the idea of sustainable development is by now well established discussions of how to progress from concept to reality often become mired in the complexities of global politics and offer few concrete solutions While achieving sustainable development will undoubtedly require changes at the global level the authors of this book emphasize that patterns of sustainable development must be built from the bottom up They focus on methods for movement toward sustainability that can occur at the grassroots level This book presents an integrated series of essays on the policies for sustainable development from one of the leading policy research institutes for environmental and developmental issues It concentrates on the developing world and looks at the specific sectors to which policies must be applied Beginning with a discussion of what constitutes sustainable development it goes on to examine the institutional measures needed to mobilize human resources for change and the economic policies for sustainable natural resource management It then considers the policies needed in agriculture urban development industry forests drylands energy use finance population and consumption The book ends with a discussion of the potential for financing new policy initiatives and the pressing need to reduce population growth and profligate consumption Throughout it demonstrates how those directly involved are best suited to manage their environments and resources Policies for sustainable development depend upon the experience and resourcefulness of local people and require that they control their own futures
