state and local model building codes that contain the latest seismic provisions These codes can reduce the damage that will occur when future earthquakes strike at risk parts of the country It is intended for state earthquake program managers and hazard mitigation officers in the emergency management agencies of the states and territories prone to earthquakes It is designed to help you convince your state and local governments that codes are effective inexpensive and a good investment for the future of our communities Illustrated **U.S. Geological Survey Professional Paper** ,1994 **Bibliography and Index of Geology** ,1990 *Human Casualties in Earthquakes* Robin Spence,Emily So,Charles Scawthorn,2011-01-03 Assessment of human casualties in earthquakes has become a topic of vital importance for national and urban authorities responsible for emergency provision for the development of mitigation strategies and for the development of adequate insurance schemes In the last few years important work has been carried out on a number of recent events including earthquakes in Kocaeli Turkey 1999 Niigata Japan 2004 Sichuan China 2008 and L Aquila Italy 2009 These events have created new and detailed casualty data which has not until now been properly assembled and evaluated This book draws the new evidence from recent events together with existing knowledge It summarises current trends in the understanding of the factors influencing the numbers and types of casualties in earthquakes it offers methods to incorporate this understanding into the estimation of losses in future events in different parts of the world it discusses ways in which pre event mitigation activity and post event emergency management can reduce the toll of casualties in future events and it identifies future research needs **Advances in Earthquake Engineering for Urban Risk Reduction** S. Tanvir Wasti,Guney Ozcebe,2006-06-15 Earthquakes affecting urban areas can lead to catastrophic situations and hazard mitigation requires preparatory measures at all levels Structural assessment is the diagnosis of the seismic health of buildings Assessment is the prelude to decisions about rehabilitation or even demolition The scale of the problem in dense urban settings brings about a need for macro seismic appraisal procedures because large numbers of existing buildings do not conform to the increased requirements of new earthquake codes and specifications or have other deficiencies It is the vulnerable buildings liable to cause damage and loss of life that need immediate attention and urgent appraisal in order to decide if structural rehabilitation and upgrading are feasible Current economic efficient and occupant friendly rehabilitation techniques vary widely and include the application either of precast concrete panels or layers strips and patches of fiber reinforced polymers FRP in strategic locations The papers in this book many by renowned authorities in earthquake engineering chart new and vital directions of research and application in the assessment and rehabilitation of buildings in seismic regions While several papers discuss the probabilistic prediction and quantification of structural damage others present approaches related with the in situ and occupant friendly upgrading of buildings and propose both economical and practical techniques to address the problem Informal Settlements, Environmental Degradation, and Disaster Vulnerability Ronald Parker,Ronald Steven Parker,Alcira Kreimer,Mohan Munasinghe,1995-01-01 The collection of papers in the book Property Rights and the
