Reevaluation Of The State Of The Science For Waterquality Criteria Development:

Developing Ambient Water Quality Criteria for Mercury D. R. J. Moore,A. Pawlisz,R. S. Teed,2003-07-31 This project examined the development of ambient water quality criteria AWQC for the protection of wildlife for mercury Mercury is considered a serious risk to wildlife in many areas As a result the Great Lakes Water Quality Initiative and others have developed AWQC These AWQC have been controversial however because 1 the AWQC were single values that did not account for site specific conditions 2 derivation of the AWQC relied on a single NOAEL and 3 the AWQC had an unknown level of conservatism because of reliance on both average and conservative assumptions and uncertainty factors Rather than develop a single value AWQC for total mercury we derive an AWQC model that explicitly incorporates factors controlling bioavailability methylation rates and bioaccumulation in the aquatic environment e g pH DOC sulfate To derive our AWQC model field data was collected including numerous water quality parameters and total mercury and methylmercury concentrations in whole body fish tissue from 31 lakes in Ontario and an additional 10 lakes in Nova Scotia An independent dataset consisting of 51 water bodies in the United States was then used to confirm the validity and robustness of the AWQC model Next we combined the results of chronic feeding studies with similar protocols and endpoints in a meta analysis to derive a dose response curve for mink exposed to mercury in the diet Using this approach one can derive an LD5 or other similar endpoint that can then be used as the basis for deriving wildlife AWQC In the final step we used a probabilistic risk model to estimate the concentrations of methylmercury in water that would lead to levels in fish sufficient for there to be a 10% probability of exceeding the mink LD5 This analysis was repeated for various combinations of pH and DOC The result is an AWQC model for mercury for the protection of wildlife that can be used for a variety of site specific conditions This publication can also be purchased and downloaded via Pay Per View on Water Intelligence Online click on the Pay Per View icon below Re-evaluation of the State of the Science for Water-quality Criteria Development Mary Reiley,2003

Population-Level Ecological Risk Assessment Lawrence W. Barnhouse, Wayne R. Munns Jr., Mary T. Sorensen, 2007-09-25 Most ecological risk assessments consider the risk to individual organisms or organism level attributes From a management perspective however risks to population level attributes and processes are often more relevant Despite many published calls for population risk assessment and the abundance of available scientific research and technical tool

Freshwater Bivalve Ecotoxicology Jerry L. Farris, John H. Van Hassel, 2006-11-16 Responding to the growing need for an aggressive yet conservative approach to evaluating mussel populations Freshwater Bivalve Ecotoxicology provides a collective review of the techniques and approaches for assessing contaminant impact on freshwater ecosystems The editors incorporate coverage of research topics and management issues from a cross section of scientists in the field They explore current advances in general monitoring of population responses to stressors fundamental concepts of ecotoxicology specific to burrowing bivalves and useful insights that offer direction and priority for resolving specific problems challenging protection and conservation efforts This book lays the groundwork with discussions of topics such as impact assessment toxicokinetics biomarkers and pollution tolerance The authors then explore fundamental concepts surrounding responses measured in freshwater bivalves as a consequence of chemical exposures or accumulated contaminants in target organs or tissues They highlight the difficulties encountered with the laboratory culture of these organisms for toxicity testing or other controlled experiments and examine the use of surrogate test organisms to relate sensitivities of response and reduce pressure on already impacted fauna The book also reviews innovative field research using in situ bivalve toxicity testing discusses effects oriented tissue contaminant

assessment and concludes with threefour specific laboratory or combined field laboratory ecotoxicology studies A summary of methods from more than 75 laboratory toxicity studies conducted with freshwater mussels the book provides an overview of a standardized method for conducting water only acute and chronic laboratory toxicity tests with glochidia juvenile freshwater mussels It focuses on studies that report measured contaminant treatments had robust experimental designs including replication of control and contaminant treatments and were published in the peer reviewed literature The resulting array of viewpoints provides a framework that can be used to establish priorities in the rehabilitation and management of freshwater ecosystems

Valuation of Ecological Resources Ralph G. Stahl Jr., Lawrence A. Kapustka, Wayne R. Munns Jr., Randall J. F. Bruins, 2007-11-19 Choosing the optimal management option requires environmental risk managers and decision makers to evaluate diverse and not always congruent needs and interests of multiple stakeholders Understanding the trade offs of different options as well as their legal economic scientific and technological implications is critical to performing accurate

Application of Uncertainty Analysis to Ecological Risks of Pesticides William J. Warren-Hicks, Andy Hart, 2010-04-07 While current methods used in ecological risk assessments for pesticides are largely deterministic probabilistic methods that aim to quantify variability and uncertainty in exposure and effects are attracting growing interest from industries and governments Probabilistic methods offer more realistic and meaningful estimates of risk and hence pot
