Hercules,2012-12-06 Any addition to the ever expanding list of scientific publications requires careful consideration and justification There are already numerous journals in analytical and clinical chemistry adequate for the publication of research results There does remain a need for a series focused on analytical and clinical chemistry to provide an overview of instrumental developments relevant to the needs of analytical and clinical chemists This is the role intended for the present series Although the title specifically indicates that the series will deal with analytical and clinical chemistry our intention is that it will deal with analytical chemistry as related to other areas such as air and water pollution oceanography earth sciences and various aspects of biomedical science and technology It seems appropriate to publish two types of articles in the series First we will provide a forum for authoritative critical reviews for the expert to enable him to cope with the ever growing problem of keeping abreast of rapid developments in his own and immediately related fields In this way we hope the series will stimulate new ideas for research by being at the cutting edge of science Second we will publish articles written by experts in the fields being covered but primarily intended for the nonexpert thereby providing him with some overview of the area Handbook of Nonpathologic Variations in Human Blood Constituents Richard W. Richardson,1994-06-21 This book brings together information currently scattered throughout the medical and scientific literature about non pathological

changes in the concentration of blood constituents The author discusses these variations which may be statistical methodological physiological age related alcohol related or due to smoking or drug use These are important variations and must be taken into account by clinicians when interpreting laboratory results The handbook offers a quantitative account of variation in the concentration of blood constituents with recommendations for international units of measurement reference interval determination and selection of reference subjects This helpful guide includes more than 1 500 references covering the whole period of development of clinical chemistry and provides an important historical perspective Previously unpublished results from the author s laboratory are also included for healthy subjects of different sex and age as well as the distribution of serum bilirubin obtained from over 3 000 hospital staff members **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1971 **Reference Values in Human Chemistry** ,1972 **Concepts in Toxicology** John H.
