Radiation Phenomena In Plasmas Toshiro Ohnuma, 1994-12-16 In this book various antennae in plasmas particle beam antennae phase group and ray velocity surfaces of various plasma modes RF ray trajectories and wave fronts in inhomogeneous anisotropic plasmas plasma waveguides radiations in ion beams and plasma streams and useful kinetic plasma dielectric tensor are illustrated with many interesting new phenomena in anisotropic plasmas Many theoretical and experimental results are demonstrated with clearly understandable figures In addition to these fields the properties of superconducting plasmas are also presented Results from radiation phenomena in various schemes are shown and they can be applied in many fields e g space plasma sciences artificial satellites in space RF heatings of plasmas and advanced processing plasmas Fundamental anisotropic phenomena in anisotropic plasmas are also expected to be applicable in other anisotropic media such as anisotropic optical fibers

Physical Acoustics M.A. Breazeale, O. Leroy, 2012-12-06 This book contains 17 invited papers and 80 communicated papers presented at the International Symposium on Physical Acoustics held at the University Campus of Kortrijk Belgium from 19-22 June 1990 The twenty fifth anniversary of the Campus was celebrated with special activities such as concerts exhibitions and scientific meetings This symposium was a part of the celebration The 120 participants came from 18 different countries Among the largest groups we mention 32 French contributions and 19 contributions from the U S S R We especially thank Prof V V Proklov from Moscow and Prof S V Kulakov from Leningrad who helped us with the distribution of invitations in the U S S R We also thank Prof G Quentin and Ir B Poiree from Paris who endeavored to inform all French acousticians We thank all the lecturers for their effort in producing the material for the book in time The invited lectures have been collected and retyped by Prof M Breazeale U S A while the contributed papers were collected by Prof O Leroy and retyped in Belgium The first 200 pages of the book comprise the invited lectures not classified by topic but are in alphabetical order with reference to the first author The second part of the book contains the contributed papers and posters also classified in alphabetical order according to the first author

Hollow Core Optical Fibre Based Gas Discharge Laser Systems Adrian Love, 2018-06-18 The research in this book represents the culmination of a drive to build the first discharge gas laser unencumbered by the effects of diffraction This breakthrough has been achieved through careful implementation of a discharge within a hollow core optical fibre and by developing measurement and analysis techniques to demonstrate laser action in an experimental optical cavity Gas lasers were amongst the earliest laser types to be demonstrated and commercialised but it was recognised that noble gas lasers were limited by the minimum bore diameter of the laser tube which is set by diffraction The advent in 2011 of hollow optical fibres with optical and physical properties suitable for gas discharge lasers opened up the opportunity to break this diffraction limit Using a mixture of helium and xenon gas lasing in the mid infrared range was achieved using a 100 m core flexible hollow optical fibre which at 1m long is several hundred times the diffraction limited Rayleigh length

Antenna

Handbook Y.T. Lo, S.W. Lee, S. W. Lee, 1993-10-31 Technology has advanced to such a degree over the last decade that it has been almost impossible to find up to date coverage of antennas. Antenna Handbook edited by two of the world's most distinguished antenna specialists presents the most advanced antenna theory and designs and demonstrates their application in a wide variety of technical fields. They offer a staggering amount of in depth data and analysis on a wide range of topics supported by formulas, curves and results as well as derivations. Geophysik III / Geophysics III J. ORNL, Modern Mössbauer Spectroscopy Yutaka Yoshida, Guido Langouche, 2021-01-19 This book presents an overview of the latest Mössbauer spectroscopy research. It sheds light on various cutting edge research subjects: i) nuclear resonance scattering experiments implemented at synchrotron radiation facilities e.g. ESRF, DESY and Spring 8; ii) multidisciplinary materials research related to chemistry, biology, geoscience, molecular magnetism of metal complexes, batteries and magnetism; iii) novel imaging techniques based on probing diffusion in solids using Mössbauer spectroscopy. The first three chapters introduce recent research on modern Mössbauer spectroscopy including nuclear resonant scattering experiments and development of related techniques at synchrotron accelerator facilities. Chapters 4 and 5 then demonstrate the applications of such pioneering techniques to chemistry, biology and geoscience. Chapters 6 and 7 describe the applications to new functional materials: i.e. metal complexes and Li and Na ion batteries, while the final two chapters are devoted to two important measuring techniques: Mössbauer spectroscopy under external magnetic fields and microscopic Mössbauer techniques on diffusion in solids which are expected to play an essential role in the investigation and characterization of magnetic structures and microstructures in materials. The cutting edge content provides readers with quick updates on the latest research topics in the field while the tutorial style descriptions allow readers unfamiliar with Mössbauer spectroscopy to learn and implement the techniques. As such, the book is especially useful for advanced undergraduate and early graduate students who have recently been assigned to a laboratory. *Contributions from the Physical Laboratory* State University of Iowa, University of Iowa. Physical Laboratory, 1917 *Physical Review*, 1920 Vols for 1903 include Proceedings of the American Physical Society. *Wave Propagation* Andrey Petrin, 2011-03-16 The book collects original and innovative research studies of the experienced and actively working scientists in the field of wave propagation which produced new methods in this area of research and obtained new and important results. Every chapter of this book is the result of the authors' achieved in the particular field of research. The themes of the studies vary from investigation on modern applications such as metamaterials, photonic crystals and nanofocusing of light to the traditional engineering applications of electrodynamics such as antennas, waveguides and radar investigations.
