*Informality and the Challenge of Pension Adequacy: Outlook and Reform Options for Peru* Christoph Freudenberg, Frederik Toscani, 2019-07-11 Past reforms have put the Peruvian pension system on a largely fiscally sustainable path but the system faces important challenges in providing adequate pension levels for a large share of the population Using administrative microdata at the affiliate level we project replacement rates in the defined benefit DB and defined contribution DC pillars over the next 30 years and simulate the impact of various reform scenarios on the average level and distribution of pensions In the DB pillar the regressive minimum contribution period should be rethought while in the DC pillar a broadening of the contribution base and or an increase in contribution rates would help increase replacement rates relative to the baseline forecast of 25 33 percent A higher net real rate of return than assumed in the baseline would also have a significant positive impact In the medium term labor market reform to tackle informality and a

broad pension reform to restructure the system and avoid competition between the DB and DC pillars should be a priority Given low pension coverage having a strong non contributory pillar will remain important for the foreseeable future
