Losing Our Cool Stan Cox, 2010-05-25 Losing our Cool shows how indoor climate control is colliding with an out of control outdoor climate. In America, energy consumed by home air conditioning and the resulting greenhouse emissions have doubled in just over a decade and energy to cool retail stores has risen by two thirds. Now the entire affluent world is adopting the technology. As the biggest economic crisis in eighty years rolls across the globe, financial concerns threaten to shove ecological crises into the background. Reporting from some of the world's hot zones from Phoenix, Arizona and Naples, Florida to southern India, Cox documents the surprising ways in which air conditioning changes human experience, giving a boost to the global warming that it is designed to help us endure, providing a potent commercial stimulant, making possible an impossible commuter economy and altering migration patterns. Air conditioning has helped alter the political hue of the United States by enabling a population boom in the red state Sun Belt. While the book proves that the planet's atmosphere cannot sustain even our current use of air conditioning, it also makes a much more positive argument that loosening our

attachment to refrigerated air could bring benefits to humans and the planet that go well beyond averting a climate crisis. Though it saves lives in heat waves, air conditioning may also be altering our bodies' sensitivity to heat, our rates of infection, allergy, asthma, and obesity, and even our sex drive. Air conditioning has eroded social bonds and thwarted childhood adventure; it has transformed the ways we eat, sleep, travel, work, buy, relax, vote, and make both love and war. The final chapter surveys the many alternatives to conventional central air conditioning. By reintroducing some traditional cooling methods, putting newly emerging technologies into practice, and getting beyond industrial definitions of comfort, we can make ourselves comfortable and keep the planet comfortable too.

Sound Design and Science Fiction William Whittington, 2021 Sound is half the picture and since the 1960s film sound not only has rivaled the innovative imagery of contemporary Hollywood cinema but in some ways has surpassed it in status and privilege because of the emergence of sound design This in depth study by William Whittington considers the evolution of sound design not only through cultural and technological developments during the last four decades but also through the attitudes and expectations of filmgoers Fans of recent blockbuster films in particular science fiction films have come to expect a more advanced and refined degree of film sound use which has changed the way they experience and understand spectacle and storytelling in contemporary cinema The book covers recent science fiction cinema in rich and

compelling detail providing a new sounding of familiar films while offering insights into the constructed nature of cinematic sound design. This is accomplished by examining the formal elements and historical context of sound production in movies to better appreciate how a film sound track is conceived and presented. Whittington focuses on seminal science fiction films that have made specific advances in film sound including 2001: A Space Odyssey, THX 1138, Star Wars, Alien, Blade Runner (original version and director's cut), Terminator 2, Judgment Day, and The Matrix trilogy, and games milestones of the entertainment industry's technological and aesthetic advancements with sound. Setting itself apart from other works, the book illustrates through accessible detail and compelling examples how swiftly such advancements in film sound aesthetics and technology have influenced recent science fiction cinema and examines how these changes correlate to the history, theory, and practice of contemporary Hollywood filmmaking.
