Climate Change,

Intercropping, Pest Control and Beneficial Microorganisms Eric Lichtfouse, 2009-09-23 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children Sustainable agriculture is a discipline that addresses current issues such as climate change increasing food and fuel prices poor nation starvation rich nation obesity water pollution soil erosion fertility loss pest control and biodiversity depletion Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy soil science molecular biology chemistry toxicology ecology economy and social sciences Indeed sustainable agriculture decipher mechanisms of processes that occur from the molecular level to the farming system to the global level at time scales ranging from seconds to centuries For that scientists use the system approach that involves studying components and interactions of a whole system to address scientific economic and social issues In that respect sustainable agriculture is not a classical narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats problem sources Because most actual society issues are now intertwined global and fast developing sustainable agriculture will bring solutions to build a safer world This book series gathers review articles that analyze current agricultural issues and knowledge then propose alternative solutions It will therefore help all scientists decision makers professors farmers and politicians who wish to build a safe agriculture energy and food system for future generations

Rethinking Risk and the Precautionary Principle Julian Morris, 2000-10-03 Rethinking Risk and the Precautionary Principle challenges the claim that the precautionary principle is an appropriate guide to public policy decision making in the face of uncertainty The precautionary principle is frequently invoked as a justification for regulating human activities From bans on the use of growth hormones in cattle to restrictions on children s playground activities precautionary thinking seems to be taking over our lives As the contributors to this book show such an approach is of dubious utility and may even be counterproductive This is a timely and important contribution to the debate on how to manage risk in the modern world The editor Julian Morris is Director of the Environment and Technology Programme at the Institute of Economic Affairs in London He has written widely on issues relating to environmental protection and technological development Up to date discussion of current issues and scientific controversies Challenges the claim that the precautionary principle is an appropriate guide to public policy decisions

Hazard Identification of Agricultural Biotechnology Ad van Dommelen, 1999 This book details opposing scientific claims about the hazard identification of modern biotechnology Offered are remedies to frustrating stalemates in the debate that trace back the conflicting biosafety claims to their experimental basis The purpose of biosafety testing is to identify possible hazards in the use of genetically engineered organisms Presented is an applied philosophy of science that focuses on finding relevant questions The potential of this pragmatic viewpoint is demonstrated in the reconstructions of a number of longstanding controversies in the biotechnology debate
