## **Safety Licensable Computing Architecture:**

**A Safety Licensable Computing Architecture** Wolfgang A Halang, Bernd J Kramer, Soon-key Jung, Johan J Scheepstra, 1993-12-30 This book describes the design of a low complexity fault detecting computer architecture for utilisation in programmable logic controllers PLCs for process control purposes The cyclic operating mode of PLCs and a specification level graphical programming paradigm based on interconnecting application oriented standard software function modules are architecturally supported Thus by design there is no semantic gap between the specification programming and machine execution levels enabling the safety licensing of application software by diverse back translation an extremely simple but rigorous method

**Humane Interfaces** J.P. Marsh, B. Gorayska, J.L. Mey, 1999-04-07 Ever since the first successful International Cognitive Technology CT Conference in Hong Kong in August 1995 a growing concern about the dehumanising potential of machines

and the machining potential of the human mind has pervaded the organisers thinking When setting up the agenda for the Second International CT Conference in Aizu Japan in August of 1997 they were aware that a number of new approaches had seen the light but that the need to integrate them within a human framework had become more urgent than ever due to the accelerating pace of technological and commercialised developments in the computer related fields of industry and research What the present book does is re emphasize the importance of the human factor not as something that we should also take into account when doing technology but as the primary driving force and supreme aim of our technological endeavours Machining the human should not happen but humanising the machine should La Humacha should replace the Hemachine in our thinking about these matters
