

- This inefficient management of water can lead to the twin problems of water logging and salinisation.
- When too much water flows over the land it can become waterlogged, and crops quickly rot and die.
- Salinisation occurs when the natural salts contained in irrigation water seep into the ground and build up in the soil, making it too salty (saline) to grow crops.

In the Indus valley in Pakistan, salinisation is a major problem for farmers. Hot temperatures cause the water in the soil to evaporate. As a result, the salts are left behind and ruin the farmland.

Salinisation Of Land And Water Resources:

Salinisation of Land and Water Resources Fereidoun Ghassemi, A. J. Jakeman, H. A. Nix, 1995 Human induced salinisation is a major threat to the world's land and water resources. Inadequate development of irrigation projects, inefficient irrigation, lack of proper drainage and environmental mismanagement such as the clearing of native vegetation are responsible for the loss of millions of hectares of agricultural and grazing land as well as the misuse of scarce water resources. The first part of this book analyses the problem in the context of the world's population, its climate and its land and water resources. It reviews irrigation methods and crop water requirements, the processes of salinisation and its management. The second part describes irrigated land, dryland and water resource salinity problems in 11 countries which contain approximately 70 per cent of the world's irrigated land. In each case, study background data, environmental conditions and past management practices are given to provide an understanding of why salinity occurs in particular places and of the management methods employed against it.

A review of management strategies for salt-prone land and water resources in Iran Asad Sarwar Qureshi, Manzoor Qadir, Nader Heydari, Hugh Turral, Arzhang Javadi, 2007-11-16 Approximately half of the irrigated area of Iran falls under different types of salt-affected soils and average yield losses may be as high as 50 percent. Slightly and moderately salt-affected soils are mostly found on the piedmonts at the foot of the Elburz Alborz Mountains in the northern part of the country. The soils having severe to extreme salinity are predominantly located in the Central Plateau, the Khuzestan and Southern Coastal Plains and the Caspian Coastal Plain. The process of salinization of the surface water resources is mainly due to natural conditions and to a lesser extent to the discharge of drainage water into the river systems. Estimates show that about 6.7 km³ of brackish water flow annually through 12 major rivers. There is no straightforward

solution to the complex problems of salt induced soil and water resources degradation in Iran The approaches addressing the management of these resources need to be multidimensional and must take into account biophysical and environmental conditions of the target areas as well as livelihood aspects of the associated communities Soil Salinity Management in Agriculture S. K. Gupta, Megh R. Goyal, 2017-03-16 This important volume Soil Salinity Management in Agriculture addresses the crucial issue of soil salinity of potential farmland and provides a comprehensive picture of the saline environment and plant interactions along with management and reclamation methods and policies With contributions from researchers from the fields of agricultural chemistry soil science biotechnology agronomy environmental sciences and plant breeding and genetics the volume emphasizes a multidisciplinary approach How to Manage Salinity in Irrigated Lands J. Wood, A.S. Alsharhan, 2003-12-09 Many countries in the world have made great efforts to remedy the water shortage by providing financial and technical backing for water desalination treatment of wastewater and improved management and conservation techniques Water ministries universities and research centres have supported scientific research and applied the most recent technologies in search of new and alternative water supplies Laws have been promulgated economic and public relation campaigns developed to promote and encourage the practice of efficient water use and the conservation of this scarce commodity This book covers water resources and management and provides a new vision of water resources management water conservation and legislations water law and modern techniques of water resources investigation Sustainable Groundwater Management Jean-Daniel Rinaudo, Cameron Holley, Steve Barnett, Marielle Montginoul, 2020-03-16 This book describes and analyses the diversity of possible approaches and policy pathways to implement sustainable groundwater development based on a comparative analysis of numerous quantitative management case studies from France and Australia This unique book brings together water professionals and academics involved for several decades in groundwater policy making planning or operational management to reflect on their experience with developing and implementing groundwater management policy The data and analysis presented accordingly makes a significant contribution to the empirical water management literature by providing novel real world insights unpublished elsewhere The originality of the contributions also lies in the different disciplinary perspectives hydrogeology economics planning and social sciences in particular adopted in many chapters The book offers a unique comparative analysis of France Australia and experiences in countries such as Chile and the US to identify similarities but also fundamental differences which are analysed and presented as alternative policy options these differences being mainly related to the role of the state the community and market mechanisms in groundwater management Remote Sensing of Soil Salinization Dr. Graciela Metternicht, Dr. Alfred Zinck, 2008-12-12 Recognized and

advocated as a powerful tool the role of remote sensing in identifying mapping and monitoring soil salinity and salinization will continue to expand Remote Sensing of Soil Salinization Impact on Land Management delineates how to combine science and geospatial technologies for smart environmental management Choose the Right Tech **Selected Water Resources Abstracts** ,1991 **Salinity: Environment — Plants — Molecules** André Läuchli,Ulrich Lüttge,2007-05-08 In biology the very big global and the very small molecular issues currently appear to be in the limelight of public interest and research funding policies They are in danger of drifting apart from each other They apply very coarse and very fine scaling respectively but coherence is lost when the various intermediate levels of different scales are neglected Regarding SALINITY we are clearly dealing with a global problem which due to progressing salinization of arable land is of vital interest for society Explanations and basic understanding as well as solutions and remedies may finally lie at the molecular level It is a general approach in science to look for understanding of any system under study at the next finer or lower level of scaling This in itself shows that we need a whole ladder of levels with increasingly finer steps from the global impact to the molecular bases of SALINITY relations It is in this vein that the 22 chapters of this book aim at providing an integrated view of SALINITY **Management of Dryland Salinity** CSIRO,2000 Dryland salinity is becoming a growing problem for Australia as it impacts upon agriculture water quality infrastructure and the environment In the context of developing a national policy for natural resource management this report contains the outcomes of the review of the current national policy framework on dryland salinity and outlines new strategic directions This policy framework recognises that dryland salinity should be addressed in an integrated manner with other land water and vegetation degradation issues Rather than in isolation and at the appropriate catchment and regional scale While this report can provide a broad approach to addressing dryland salinity it does not suggest that the dryland salinity problem can be entirely solved or that we have all the knowledge required to develop solutions to the problem The directions outlined in this document are the result of a fruitful collaboration across jurisdictions acknowledging that governments and industry must work together in partnership with communities to ensure that the future management of dryland salinity achieves significant positive change **Modern Land Drainage** Lambert K. Smedema,Willem F. Vlotman,David Rycroft,2004-08-15 Fully renewed and extended this edition is a valuable source of information for anyone involved in drainage engineering and management It provides new theories technologies knowledge and experiences in combination with traditional land development practices in the humid temperature zone Aspects covered include management and maintenance drainage application and design and adverse impacts on the environment Intended as both a handbook and a textbook this work is of particular value to university students as well as professionals within drainage development engineering and management Guideline for Salinity Assessment, Mitigation and Adaptation Using Nuclear and Related Techniques Mohammad Zaman,Shabbir A.
