Albertazzi, 2013-03-09 impossible triangle after apprehension of the perceptively given mode of being of that object, the visual system assumes that all three sides touch on all three sides, whereas this happens on only one side. In fact, the sides touch only optically because they are separate in depth. In Meinong's words, Penrose's triangle has been inserted in an objective or in what we would today call a cognitive schema. Re-examination of the Graz school's theory, as said, sheds light on several problems concerning the theory of perception, and as Luccio points out in his contribution to this book, it helps to eliminate a number of over-simplistic commonplaces such as the identification of the cognitivist notion of top-down with Wertheimer's von oben unten and of bottom-up with his von unten nach oben. In fact, neither Hochberg's and Gregory's concept-driven perception nor Gibson's data-driven perception coincide with the original conception of the Gestalt. **The Shapes of Sleep**

Evan Luard, 1962 *The Shapes of Sleep* John Boynton Priestley, 1988 Ben Sterndale, a freelance journalist who is currently not working, is offered a commission by a friend. The boss of the advertising agency where the friend works has lost or had stolen a sheet of paper. This paper was covered in figures, but no one knew what they meant. Sterndale establishes who visited the boss's office and immediately realises that one of those is reported in the evening paper as a casualty in a road accident. He accepts the commission and heads off to the hospital where, by posing as an insurance man, he obtains some useful clues. The victim subsequently dies, and Sterndale finds that there are several people looking into the man's affairs, none of whom is known to the others. His enquiries lead him to Germany where he eventually tracks down the author of the paper and discovers the meaning of those figures. *A Lexical Concordance to the Poetical Works of Percy Bysshe Shelley*, 1892
