Measuring Wellbeing: Towards Sustainability? Karen Scott, 2012-07-26 Improving wellbeing and sustainability are central goals of government but are they in conflict This engaging new book reviews that question and its implications for public policy through a focus on indicators It highlights tensions on the one hand between various constructs of wellbeing and sustainable development and on the other between current individual and societal notions of wellbeing It

recommends a clearer conceptual framework for policy makers regarding different wellbeing constructs which would facilitate more transparent discussions. Arguing against a win win scenario of wellbeing and sustainability it advocates an approach based on recognising and valuing conflicting views where notions of participation and power are central to discussions. *Measuring Wellbeing* is divided into two parts. The first part provides a critical review of the field drawing widely on international research but contextualised within recent UK wellbeing policy discourses. The second part embeds the theory in a case study based on the author's own experience of trying to develop quality of life indicators within a local authority against the backdrop of increasing national policy interest in measuring happiness. This accessible and informative book covering uniquely both practice and theory will be of great appeal to students, academics and policy makers interested in wellbeing, sustainable development, indicators, public policy, community participation, power and discourse. Lecturers and students on sustainable design and construction courses will find the latest real world case studies fascinating and a great source of inspiration for their studio project work. *Education for Sustainable Development* Brian Chalkley, Martin Haigh, David Higgitt, 2013-09-13. In 2005, The United Nations launched its Decade of Education for Sustainable Development, which recognises that education, including Higher Education, is the key to the change in social attitudes that will be needed to protect the welfare of future generations. This involves helping learners to live as though the future matters and to achieve ecoliteracy. This includes the understanding that personal lifestyle decisions may have consequences ranging from climate change through loss of biodiversity to pollution and resource depletion that may permit environmental degradation on a planetary scale. It also involves helping them to develop the skills needed to cope with such challenges. This international collection of research papers and position statements from special issues of the *Journal of Geography in Higher Education* and *Applied Environmental Education* and

Communication written by many of the leading practitioners in the field aims to provide resources and practical guidance for all seeking to promote and engage in education for a sustainable future Rabindranath Tagore encouraged each learner to make their actions demonstrate a harmonious union between education and environment David Orr argued that the world needs people who live well in their places to make the world both habitable and humane and that the main challenge for education is to help learners make their minds fit for life on Earth This book tries to chart a practical route towards these objectives This book was previously published as special issues of the Journal of Geography in Higher Education and Applied Environmental Education and Communication
