Who You Are Michael J. Spivey, 2020-03-30 Why you are more than just a brain more than just a brain and body and more than all your assumptions about who you are Who are you Are you just a brain A brain and a body All the things you have done and the friends you have made Many of us assume that who we really are is something deep inside us an inner sanctuary that contains our true selves In Who You Are Michael Spivey argues that the opposite is true that you are more than a brain more than a brain and body and more than all your assumptions about who you are Rather than peeling layers away to reveal the inner you Spivey traces who you are outward You may already feel in your heart that something outside your body is actually part of you a child a place a favorite book Spivey confirms this intuition with scientific findings With each chapter Spivey incrementally expands a common definition of the self After gently helping you to discard your assumptions about who you are he draws on research in cognitive science and neuroscience to explain the back and forth among all the regions of the brain and the interaction between the brain and body He then makes the case for understanding objects and locations in your environment as additional parts of who we are Going even further he shows that just as interaction links brain body and environment ever expanding systems of interaction link humans to other humans to nonhuman animals and to nonliving matter This may seem an interaction or two too far But you don't have to take his word for it just consider the evidence he

presents *Contact with Extraterrestrial Intelligence and Human Law* Michael Bohlander, 2023-08-07 It is statistically unlikely that humans are the only intelligent species in the universe Nothing about the others will be known until contact is made beyond a radio signal from space that merely tells us they existed when it was sent That contact may occur tomorrow in a hundred years or never If it does it will be a high risk scenario for humanity It may be peaceful or hostile Relying on alien altruism and benign intentions is wishful thinking We need to begin identifying as a planetary species and develop a global consensus on how to respond in either scenario

Alien Universe Don Lincoln, 2013-10-15 Are alien civilizations really possible If extraterrestrials exist where are they How likely is it that somewhere in the universe an Earth like planet supports an advanced culture Why do so many people claim to have encountered Aliens In this gripping exploration scientist Don Lincoln exposes and explains the truths about the belief in and the search for life on other planets In the first half of *Alien Universe* Lincoln looks to Western civilization's collective image of Aliens showing how our perceptions of extraterrestrials have evolved over time The roots of this belief can be traced as far back as our earliest recognition of other planets in the universe the idea of them supporting life was a natural progression of thinking that has fascinated us ever since Our captivation with Aliens has however led to mixed results The world was fooled in the nineteenth century during the Great Moon Hoax of 1835 and many people misunderstood Orson Welles's 1938 radio broadcast *The War of the Worlds* leading to significant anxiety among some listeners Our continuing interest in Aliens is reflected in entertainment successes such as *E T* *The X Files* and *Star Trek* The second half of the book explores the scientific possibility of whether advanced Alien civilizations do exist For many years researchers have sought to answer Enrico Fermi's great paradox if there are so many planets in the universe and there is a high probability that many of those can support life then why have we not actually encountered any Aliens Lincoln describes how modern science teaches us what is possible and what is not in our search for extraterrestrial civilizations Whether you are drawn to the psychological belief in Aliens the history of our interest in life on other planets or the scientific possibility of Alien existence *Alien Universe* is sure to hold you spellbound

Civilizations Beyond Earth Douglas A. Vakoch, Albert A. Harrison, 2011-09-01 Astronomers around the world are pointing their telescopes toward the heavens searching for signs of intelligent life If they make contact with an advanced alien civilization how will humankind respond In thinking about first contact the contributors to this volume present new empirical and theoretical research on the societal dimensions of the Search for Extraterrestrial Intelligence SETI Archaeologists and astronomers explore the likelihood that extraterrestrial intelligence exists using scientific insights to estimate such elusive factors as the longevity of technological societies Sociologists present the latest findings of novel surveys tapping into the public's attitudes about life beyond Earth to show how religion and education influence beliefs about extraterrestrials Scholars from such diverse disciplines as mathematics chemistry journalism and religious studies offer innovative solutions for bridging the cultural gap between human and extraterrestrial civilizations while recognizing the tremendous challenges of communicating

at interstellar distances At a time when new planets are being discovered around other stars at an unprecedented rate this collection provides a much needed guide to the human impact of discovering we are not alone in the universe **The Institutions of Extraterrestrial Liberty** Charles S. Cockell,2022-12-09 The exploration of space raises new problems in the expression of human freedoms While the potential to establish new extraterrestrial settlements is thrilling it also brings along a myriad of decisions to consider when addressing how these settlements should operate in a way which maintains human liberties In this book many dimensions of freedom in space are discussed Aspects of liberty beyond Earth from the near term freedom to claim satellite orbits to the very long term freedom on interstellar worldships are considered Gathering a diverse set of expertise from scientists ethicists lawyers philosophers and social scientists they seek to collectively answer questions such as How should early governance structures be assembled What are the ideal forms of institutions from science academies to schools and governments What freedoms can people expect in space and how will governance beyond Earth tread the fine line between authority and liberty A compelling analysis of liberties on Earth the solar system and beyond this text is bound to inspire the interests of academics and scientists alike **50 Popular Beliefs That People Think Are True** Guy P. Harrison,2012-01-03 What would it take to create a world in which fantasy is not confused for fact and public policy is based on objective reality asks Neil deGrasse Tyson science popularizer and author of *Astrophysics for People in a Hurry* I don't know for sure But a good place to start would be for everyone on earth to read this book Maybe you know someone who swears by the reliability of psychics or who is in regular contact with angels Or perhaps you're trying to find a nice way of dissuading someone from wasting money on a homeopathy cure Or you met someone at a party who insisted the Holocaust never happened or that no one ever walked on the moon How do you find a gently persuasive way of steering people away from unfounded beliefs bogus cures conspiracy theories and the like This down to earth entertaining exploration of commonly held extraordinary claims will help you set the record straight The author a veteran journalist has not only surveyed a vast body of literature but has also interviewed leading scientists explored the most haunted house in America frolicked in the inviting waters of the Bermuda Triangle and even talked to a contrite Roswell alien He is not out simply to debunk unfounded beliefs Wherever possible he presents alternative scientific explanations which in most cases are even more fascinating than the wildest speculation For example stories about UFOs and alien abductions lack good evidence but science gives us plenty of reasons to keep exploring outer space for evidence that life exists elsewhere in the vast universe The proof for Bigfoot or the Loch Ness Monster may be nonexistent but scientists are regularly discovering new species some of which are truly stranger than fiction Stressing the excitement of scientific discovery and the legitimate mysteries and wonder inherent in reality this book invites readers to share the joys of rational thinking and the skeptical approach to evaluating our extraordinary world *Science & Religion* John Ross Jr.,2016-12-19 *Science and Religion Interpersonal Dialogue Discussion and Debate* is a unique handbook for college students and adults interested in exploring

the persuasive and rhetorical strategies surrounding today's fashionable topics in science and religion. Offered in three accommodating sections, John Ross presents valuable chapters on Humans, Communication and Language, the Importance and Meaning of Interpersonal Dialogue, and a very timely chapter entitled Avenues of Dialogue: Dissimilarity, Discord, and Alliance. Part II explores captivating issues surrounding Faith, the After Life, Apologetics, and Atheistic Scientism. There is also an innovative section on the human brain, higher intelligence, and even on the questionable phenomena of neuroethology, UFO cults, and the disputable God Helmet. The final chapters explore contemporary miracles, creation accounts, astrobiology, and the current challenges surrounding SETI in its quest for extraterrestrial life. Ross eloquently addresses the possibilities of alien life and the resulting consequences and challenges it brings for Biblicists in the world of Christian fundamentalism. The book also includes a synopsis of the major world religions and a final section entitled Group Presentation Models in Science and Religion. This handbook is unique in that it smartly combines principles of communication, rhetoric, and public speaking with contemporary issues in science, theology, and religion.
