Marine Genetic Resources, Access and Benefit Sharing Bevis Fedder, 2013-05-29 Access to genetic resources and Benefit Sharing ABS has been promoted under the

Convention on Biological Diversity with the aim of combining biodiversity conservation goals with economic development. However, as this book shows, since its inception in 1992, implementation has encountered multiple challenges and obstacles. This is particularly so in the marine environment where interest in genetic resources for pharmaceuticals and nutrients has increased. This is partly because of the lack of clarity of terminology but also because of the terms of the comprehensive law of the sea UNCLOS and transboundary issues of delineating ownership of marine resources. The author explains and compares relevant provisions and concepts under ABS and the law of the sea, taking access, benefit sharing, monitoring, compliance, and dispute settlement into consideration. He also provides an overview of the implementation status of ABS relevant measures in user states and identifies successful ABS transactions. A key unique feature of the book is to illustrate how biological databases can serve as the central scientific infrastructure to implement the global multilateral benefit sharing mechanism proposed by the Nagoya Protocol. The research for this book was supported by both the Bremen

Violent Environments Nancy Lee Peluso, Michael Watts, 2001. Do environmental problems and processes produce violence? Current U.S. policy about environmental conflict and scholarly work on environmental security assume direct causal links between population growth, resource scarcity, and violence. This belief, a staple of governmental decision making during both Clinton administrations and widely held in the environmental security field, depends on particular assumptions about the nature of the state, the role of population growth, and the causes of environmental degradation. The conventional understanding of environmental security and its assumptions about the relation between violence and the environment are challenged and refuted in *Violent Environments*. Chapters by geographers, historians, anthropologists, and sociologists include accounts of ethnic war in Indonesia, petro violence in Nigeria, and Ecuador wildlife conservation in

Tanzania and friendly fire at Russia's nuclear weapons sites Violent Environments portrays violence as a site specific phenomenon rooted in local histories and societies yet connected to larger processes of material transformation and power relations The authors argue that specific resource environments including tropical forests and oil reserves and environmental processes such as deforestation conservation or resource abundance are constituted by and in part constitute the political economy of access to and control over resources Violent Environments demands new approaches to an international set of complex problems powerfully arguing for deeper more ethnographically informed analyses of the circumstances and processes that cause violence
