**Novel Targets for Chronic Inflammatory Diseases: Focus On Therapeutic Drugs and Natural Compounds, volume II** Yan Huang, Zhigang Xiong, Songyan Liao, Feng Li, Li Wu, 2024-03-18 This Research Topic is part of a series with *Novel Targets for Chronic Inflammatory Diseases: Focus On Therapeutic Drugs and Natural Compounds*. Chronic inflammation is a component of many disease conditions that affect a large group of individuals worldwide, which is characterized by persistent low-grade inflammation and is increased in the aging population. It occurs when an initiating stimulus is not removed or if the resolution process is disrupted, resulting in a state of low-grade inflammation. It is acknowledged that chronic inflammatory diseases are involved in cardiovascular diseases, endocrine disease, neurodegenerative disease, hepatic disease, pulmonary disease, gastrointestinal disease, and cancer, et al., including but not limited to atherosclerosis, diabetes, multiple sclerosis, fibrosis, NAFLD, COPD, inflammatory bowel disease, autoimmune disorders like SLE, RA, which are major causes of death worldwide. Immunity is a physiological function of the human body which maintains health by destroying and rejecting foreign substances, including antigens, damaged cells, and tumors, et al. There is a close relationship between inflammation and immunity; whether they are both protective mechanisms against invasion or injury responses. Therefore, the important role of inflammatory and immune responses should be noted; it is necessary to explore novel targets and therapeutic drugs for chronic inflammatory diseases.
