Handbook of Clinical Health Psychology C. Green,R. Meagher,T. Millon,2012-12-06 We seek to throw down the gauntlet with this handbook challenging the hegemony of the behavioral medicine approach to the psychological

study and treatment of the physically ill This volume is not another in that growing surfeit of texts that pledge allegiance to the doctrinaire purity of behavioristic thinking or conceptualize their subject in accord with the sterility of medical models Diseases are not our focus nor is the narrow band of behavioral assessment and therapy methodologies Rather we have sought to redefine this amorphous yet burgeoning field so as to place it squarely within the province of a broadly based psychology specifically the emerging substantive discipline of health psychology and the well established professionalism and diverse technologies of clinical psychology The handbook's title Clinical Health Psychology reflects this reorientation explicitly and Chapter 1 addresses its themes and provides its justifications more fully In the process of developing a relevant and comprehensive health assessment tool the editors were struck by the failure of clinical psychologists to avail themselves of the rich vein of materials that comprise the psychosocial world of the physically ill Perhaps more dismaying was the observation that this field was being mined less than optimally by physicians and nonclinical psychologists

Platonism and Positivism in Psychology Julie Christian, Mortimer Adler, 2018-04-17 Psychology is a field of many paradoxes Since its earliest beginnings as a natural science psychologists have been in search of their proper subject matter Today they are in less agreement than ever In this classic text originally published as What Man Has Made of Man Mortimer J Adler goes to the root of the problem He shows that psychology is simultaneously a particular social science and a branch of philosophical knowledge These two parts must be distinguished from yet related to each other if sound philosophical analysis is to replace bad philosophizing which scientific psychologists too often use to describe their research findings Adler also examines the scientific contribution of

psychoanalysis by distinguishing it from Freud's meta psychology which he shows to be an inadequate statement of the traditional or classical philosophical positions Adler believes that psychology is crucially important in modern culture It is theoretically important because it is central to the errors of modern philosophy It has practical significance because economic moral and political doctrines are determined by the view that man reviews his own nature To understand the history of modern times and to correct its normative deviations we must according to Adler consider what man has made of man This engaging analytical study will be a valuable tool for psychologists psychoanalysts philosophers and sociologists
