The Oxford Handbook of Ecocriticism Greg Garrard, 2014-07-03 The Oxford Handbook of Ecocriticism provides a broad survey of the longstanding relationship between literature and the environment The moment for such an offering is opportune in many respects multiple environmental crises are increasingly inescapable at both transnational and local levels the role of the humanities in addition to technology and politics is increasingly recognized as central for exploring and finding solutions and the subject of ecocriticism has reached a kind of critical mass both within its Anglo American heartlands and beyond From its origins in the study of American Nature Writing and British Romanticism ecocriticism has developed along numerous theoretical historical cultural and geographical axes the most contemporary and exciting of which will be represented in the Handbook The contributors include eminent founders of the field including Michael Branch and Richard Kerridge a number of key second wave ecocritics and the best up and coming scholars Topics covered include Renaissance anxieties about nature the challenges of representing climate change the racialization of the environment in the early 20th century language and the concept of biosemiotics and the possibilities for environmental humour

The Myth of Research-Based Policy and Practice Martyn Hammersley, 2013-03-13 Martyn Hammersley's provocative new text interrogates the complex relationship between research policymaking and practice against the background of the evidence based practice movement Addressing a series of probing questions this book reflects on the challenge posed by the idea that social research can directly serve policymaking and practice Key questions explored include Is scientific research evidence based What counts as evidence for evidence based practice Is social measurement possible and is it necessary What are the criteria by which qualitative research should be judged The book also discusses the case for action research the nature of systematic reviews proposals for interpretive reviews and the process of qualitative synthesis Highly readable and undeniably relevant this book is a valuable resource for both academics and professionals involved with research

Embodied Communication in Humans and Machines Ipke Wachsmuth, Manuela Lenzen, Günther Knoblich, 2008-09-04 When people communicate face to face they

don't just exchange verbal information. Rather, communication encompasses the whole body. Communication partners synchronize their body sway and mimic or imitate each other's body postures and actions. They produce a multitude of manual and facial gestures that help to illustrate what is being said, show how communication partners feel, or reveal verbal deception. Moreover, face-to-face communication takes place in shared contexts where partners jointly attend and refer to the same objects, often while working on joint tasks such as carrying a table or repairing a car together. Traditionally, communication research has neglected these parts of communication, using the engineering model of signal transmission as the main theoretical metaphor. This book takes a new look at recent empirical findings in the cognitive and neurosciences, showing that the traditional approach is insufficient and presenting a new interdisciplinary perspective: the Embodied Communication perspective. The core claim of the Embodied Communication perspective is that human communication involves parallel and highly interactive couplings between communication partners. These couplings range from low-level systems for performing and understanding instrumental actions like the mirror system to higher systems that interpret symbols in a cultural context. The book can also serve as a guide for engineers who construct artificial agents and robots that should be able to interact with humans.

New Directions in Third Wave Human-Computer Interaction: Volume 2 - Methodologies Michael Filimowicz, Veronika Tzankova, 2018-06-27. This is the first extensive compilation documenting contemporary third wave HCI, covering key methodological developments at the leading edge of human-computer interactions. Now in its second decade as a major current of HCI research, the third wave integrates insights from the humanities and social sciences to emphasize human dimensions beyond workplace efficiency or cognitive capacities. Where the earliest HCI work has been strongly based on the concept of human-machine coupling, which expanded to workplace collaboration as computers came into mainstream professional use, today HCI can connect to almost any human experience because there are new applications for every aspect of daily life. Volume 2: Methodologies covers methodological approaches grounded in autoethnography, empathy-based design, crowdsourcing, psychometrics, user engagement, speculative design, somatics, embodied cognition, peripheral practices, and transdisciplinarity.

Being Alongside Alf Coles, 2013-06-13. How do you establish a classroom culture in which students routinely conjecture and think mathematically? How do you establish a way of working with teachers using video in which discussion supports professional development? The present book offers answers to these questions through an in-depth enactivist study of one exceptional teacher in one innovative mathematics department in the UK. The book reveals some striking parallels between working to support students' mathematical thinking and working to support teacher learning. A case is made for the importance of metacommunication in both contexts: communication about the communications that are occurring. For example, there is compelling evidence from a classroom that metacommunication linked to the words 'conjecture' and 'becoming a mathematician' supports student metacognition and mathematical thinking. In working with teachers or students, offering these powerful metacommunications seems to require a

Shook, Paulo Ghiraldelli, Ghiraldelli Jr. Paulo, 2008-02 Contemporary Pragmatism is an interdisciplinary international journal for discussions of applying pragmatism broadly understood to today's issues. CP will consider articles about pragmatism written from the standpoint of any tradition and perspective. CP especially seeks original explorations and critiques of pragmatism and also of pragmatism's relations with humanism, naturalism, and analytic philosophy. CP cannot consider submissions that principally interpret or critique historical figures of American philosophy, although applications of past thought to contemporary issues are sought. CP welcomes contributions dealing with current issues in any field of philosophical inquiry from epistemology, philosophy of language, metaphysics, and philosophy of science, and philosophy of mind and action, to the areas of theoretical and applied ethics, aesthetics, social, political philosophy, philosophy of religion, and philosophy of the social sciences. CP encourages work having an interdisciplinary orientation, establishing bridges between pragmatic philosophy and, for example, theology, psychology, pedagogy, sociology, economics, medicine, political science, or international relations. Two issues each year will be published in the summer and winter seasons.
