Reconfigurable Computing: Architectures, Tools and Applications Phaophak Sirisuk, Fearghal Morgan, Tarek El-Ghazawi, Hideharu Amano, 2010-03-10 Reconfigurable computing RC systems have generated considerable interest in the embedded and high performance computing communities over the past two decades with embedded programmable gate arrays FPGAs as the leading technology at the helm of innovation in this discipline Achieving orders of magnitude performance and power improvements using FPGAs over traditional microprocessors is not uncommon for well suited applications But even with two decades of research and technological advances FPGA design still presents a substantial challenge and often necessitates hardware design expertise to exploit its true potential Although the challenges to address the design productivity issues are steep the promise and the potential of the RC technology in terms of performance power size and versatility continue to attract application design engineers and RC researchers alike The International Symposium on Applied Reconfigurable Computing ARC aims to bring together researchers and practitioners of RC systems with an emphasis on practical applications and design methodologies of this promising technology This year's ARC symposium The sixth ARC symposium was held in Bangkok Thailand during March 17-19 2010 and attracted papers in three primary focus areas RC applications RC architectures and RC design methodologies

Massively Parallel Processing Applications and Development L. Dekker, W. Smit, J.C. Zuidervaat, 2013-10-22 The contributions of a diverse selection of international hardware and software specialists are assimilated in this book's exploration of the development of massively parallel processing MPP The emphasis is placed on industrial applications and collaboration with users and suppliers from within the industrial community consolidates the scope of the publication From a practical point of view massively parallel data processing is a vital step to further innovation in all areas where large amounts of data must be processed in parallel or in a distributed manner e.g. fluid dynamics meteorology seismics molecular engineering image processing parallel database processing MPP technology can make the speed of computation higher and substantially reduce the computational costs However to achieve these features the MPP software has to be developed further to create user friendly programming systems and to become transparent for present day computer software Application of novel electro optic components and devices is continuing and will be a key for much more general and powerful architectures Vanishing of communication hardware limitations will result in the elimination of programming bottlenecks in parallel data processing Standardization of the functional characteristics of a programming model of massively parallel computers will become established Then efficient

programming environments can be developed The result will be a widespread use of massively parallel processing systems in many areas of application

Parallel Computing Jonathan P. Gray, Fazel Naghdy, 1995 The broadening of interest in parallel computing and transputers is reflected in this book Topics discussed include concurrent programming graphics and image processing parallel applications robotics and control and software tools The book also features a collection of abstracts of poster presentations
