Reducing Soil Water Evaporation With Tillage And Straw Mulching:

Reducing Soil Water Evaporation with Tillage and Straw Mulching S. K. Jalota, 1998 **The sustainable intensification of smallholder farming systems** Dr Dominik Klauser, Dr Mike Robinson, 2020-11-24 Strong coverage of improving smallholder access to key inputs from seeds to nutrition and pest management Reviews ways of improving public and private sector extension support as well as market access for smallholders Chapter authors mix research expertise and practical experience of successful project implementation on the ground **Performance Evaluation of Micro Irrigation Management** Megh R. Goyal, 2016-11-25 This new volume in the Innovations and Challenges in Micro Irrigation series covers an array of technologies to estimate evapotranspiration and to evaluate parameters that are needed in the management of micro irrigation with worldwide applicability to irrigation management in agriculture Topics include recent evapotranspiration research performance evaluation of filters and emitters evaluation of fertigation and ground water with treated wastewater effluent performance of pulse drip irrigated potato under organic agriculture practices in sandy soils impact of polyethylene mulch on micro irrigated cabbage and tree injection irrigation Understanding Climate Change Impacts on Crop Productivity and Water Balance S. K. Jalota, B. B. Vashisht, Sandeep Sharma, Samanpreet Kaur, 2018-02-19 Understanding Climate Change Impacts on Crop Productivity and Water examines the greenhouse gas emissions and their warming effect climate change projections crop productivity and water The book explores the most important greenhouse gases that influence the climate system technical terms associated with climate projections and the different mechanisms impacting crop productivity and water balance Adaptive and mitigative strategies are proposed to cope with negative effects of climate change in particular domains This book will help researchers interested in climate change impacts on the atmosphere soil and plants Uncovers links between climate change and its impact on crop and water outputs Integrates information on greenhouse gas cycles and mathematical equations into climate crop models for analysis and seasonal prediction systems Provides strategies for efficient resource management and sustainable crop production in future Helps researchers interested in climate change impacts on the atmosphere soil and plants **Mulching in Agroecosystems** Kashif Akhtar, Muhammad Arif, Muhammad Riaz, Haiyan Wang, 2022-11-25 This book provides insights into recent developments in the use of mulching in agroecosystems with emphasis on the major pros and cons Increase in human population climatic changes and agricultural intensification have put enormous pressure on soil and water resources As a result we are confronted with challenges to enhance nutrient and water use efficiencies and conserve soil organic matter without compromising crop yields and food security Increasing the soil organic matter SOM via residue return increased nutrient availability and soil physical and biological properties Management practices such as straw mulching or incorporation have significant effects on soil health Straw addition also increases functionality related to carbon and N metabolism via increasing the microbes and thus greatly contributes to CO₂ and N₂O emissions However the co use of

organic and inorganic fertilizer reduces the N₂O emission without compromising crop yield Mulching has long been advocated to conserve soil moisture and increase the efficiency of macro and micro nutrients by improving soil physical chemical and biological properties These effects of mulch are translated into better crop yields while improving soil health and quality in the long run Therefore the use of mulching techniques is on the rise in organic as well as conventional agriculture The book is of great interest for researchers academics agriculture extensionists soil and plant scientist fertilizer industry farmers agro industrial workers farm managers NGOs and climate and civil society activists

Evapotranspiration
Ayse Irmak, 2012-01-18 This edition of Evapotranspiration Remote Sensing and Modeling contains 23 chapters related to the modeling and simulation of evapotranspiration ET and remote sensing based energy balance determination of ET These areas are at the forefront of technologies that quantify the highly spatial ET from the Earth's surface The topics describe mechanics of ET simulation from partially vegetated surfaces and stomatal conductance behavior of natural and agricultural ecosystems Estimation methods that use weather based methods soil water balance the Complementary Relationship the Hargreaves and other temperature radiation based methods and Fuzzy Probabilistic calculations are described A critical review describes methods used in hydrological models Applications describe ET patterns in alpine catchments under water shortage for irrigated systems under climate change and for grasslands and pastures Remote sensing based approaches include Landsat and MODIS satellite based energy balance and the common process models SEBAL METRIC and S SEBS Recommended guidelines for applying operational satellite based energy balance models and for overcoming common challenges are made

Changing Climate and Resource use Efficiency in Plants Amitav Bhattacharya, 2018-11-01 Changing Climate and Resource Use Efficiency in Plants reviews the efficiencies for resource use by crop plants under different climatic conditions This book focuses on the challenges and potential remediation methods for a variety of resource factors Chapters deal with the effects of different climatic conditions on agriculture radiation use efficiency under various climatic conditions the efficiency of water and its impact on harvest production under restricted soil moisture conditions nitrogen and phosphorus use efficiency nitrogen use efficiency in different environmental conditions under the influence of climate change and various aspects of improving phosphorus use efficiency The book provides guidance for researchers engaged in plant science studies particularly Plant Crop Physiology Agronomy Plant Breeding and Molecular Breeding In addition it provides valuable insights for policymakers administrators plant based companies and agribusiness companies Explores climatic effects on agriculture through radiation water nitrogen and phosphorus use efficiency Guides the planning and research of and recommendations for fertilizer application for different crops under various climatic conditions Discusses efficiency improvements for plant and molecular breeders seeking to maximize resource use

Forest Hydrology Mingteh Chang, 2012-11-01 Due to its height density and thickness of crown canopy fluffy forest floor large root system and horizontal distribution forest is the most distinguished type of vegetation on the earth In the U S forests occupy about 30 percent of the

total territory Yet this 30 percent of land area produces about 60 percent of total surface runoff the major water resource area of the country Any human activity in forested areas will inevitably disturb forest floors and destroy forest canopies consequently affecting the quantity quality and timing of water resources Thoroughly updated and expanded Forest Hydrology An Introduction to Water and Forests Third Edition discusses the concepts principles and processes of forest and forest activity impacts on the occurrence distribution and circulation of water and the aquatic environment Brings water resources and forest water relations into a single comprehensive textbook Focuses on the concepts processes and general principles in forest hydrology Covers functions properties and science of water water distribution forests and precipitation vaporization stream flow and stream sediment Discusses watershed management planning and practical applications of forest hydrology in resource management In a single textbook Forest Hydrology An Introduction to Water and Forests Third Edition comprehensively covers water and water resources issues forest characteristics relevant to the environment forest impacts in the hydrological cycle watershed research watershed management planning and hydrologic measurements With the addition of new chapters new issues and appendices this new edition is a valuable resource for upper level

undergraduates in forest hydrology courses as well as professionals involved in water resources management and decision making in forested watersheds **Groundwater Management for Sustainable Agriculture in the North China Plain**

Yanjun Shen,2024-09-03 This book is a unique text that explores recent research on the management of sustainable groundwater use in the North China Plain NCP where aquifers are suffering the most severe over pumping in the world and have caused serious ecological degradation It contains research conducted by the editor and his teams on several projects over the past 18 years Key topics covered include comprehensive scheme and pathways to achieve sustainable groundwater management description of theoretical basis for water saving and technologies developed in practice at field scale adjusting cropping patterns and planting structure to reduce the cultivation intensity to a suitable extent soft measures such as water metering pricing and water marketing being applied in groundwater management practice in the NCP It will be an invaluable resource to graduate students education and research staff and agriculture or water resources authorities **Managing**

Energy, Nutrients, and Pests in Organic Field Crops Ralph C. Martin,Rod MacRae,2014-02-07 The use of organic management practices in field cropping continues to rise globally and these methods have proven to be a viable way to produce food with reduced resource use and environmental damage Managing Energy Nutrients and Pests in Organic Field Crops challenges the popular misconception that organic systems are weak at managing energy nutrients and pests and shows how innovative farm designs can enhance organic performance It provides information for assessing the current state of knowledge on organic field cropping and for making the systems more viable Each chapter summarizes the latest data from a wide range of sources creating a comprehensive and coherent picture of the issues and integrating agronomic economic and policy aspects Many chapters also include recent research from the authors Section I Soil Health examines the

importance of phosphorus balance soil fertility and tillage reduction Section II Pest Management focuses on integrated weed management and long term approaches to insect management Section III Integrating Approaches addresses multiple field cropping challenges Chapters cover the oldest organic rotational trials in Canada the issue of using cereals bred for conventional systems and more targeted organic cereal breeding strategies and case studies of a broad spectrum of farming experiences that explore the broader social and ecological landscape The final section Economics Energy and Policy examines environmental issues not previously addressed in the text as well as consumer economic and rural community matters It also presents a reprint of an article that describes policies and programs and their costs needed to advance adoption of organic farming in Ontario The text wraps up with key conclusions and a discussion of overarching themes for the book summarizing the strengths of the available tool box for organic producers and the challenges that remain
