Lehr,COLORADO UNIV AT BOULDER DEPT OF CIVIL ENGINEERING.,1983 The Resource Conservation and Recovery Act and the Safe Drinking Water Act are forcing those in charge of landfills to adhere to more stringent operating standards This along with the growing scarcity of landfill availability makes the use of landfills less desirable for solid waste disposal As such new disposal methods that are environmentally safe and economically practical must be found One alternative that is not really new but which has gained renewed interest is incineration The Resource Conservation and Recovery Act also requires that government agencies should direct their installations to recover as many resources as possible Therefore if incineration is to be implemented heat recovery should be incorporated into the system There are several processes available to convert raw refuse into a fuel for use in a heat recovery system Refuse derived fuels RDF can be in the form of raw refuse densified refuse powdered refuse gas or pyrolytic oil The only form of RDF that is economically feasible for systems designed to process less than 200 TPD tons per day is raw refuse Most Navy bases generate far less than 200 TPD of solid waste and therefore the Navy has focused most of its attention on modular heat recovery incinerator HRI systems that utilize raw refuse as fuel **The Use of Waste Oils to Improve Densified Refuse Derived Fuels** ,1980 Refuse-derived Fuel (RDF) and
