

Sales Forecasting Systems

- Strategic Sales Forecasting Systems usually include several varieties of forecasts: forecasts of sales for the industry as a whole, forecasts of sales for the entire organisation, forecasts of sales for each product or service, forecasts of sales for a new product or service, and forecasts for market segments.
- The results of these sales forecasts are often further categorised by sales territory and sales division. Regardless of type, sales forecasts are usually based on more than historical data; they are not merely projections of past trends.
- Sales forecasts are also based on assumptions about the activities of the competition, government action, shifting customer demand, economic trends, demographic trends, and a variety of other pertinent factors, including even the weather.
- From the sales forecast, tactical decisions regarding the directions of many other organisational functions will flow.
