## **Setting Priorities For Land Conservation:**

**Setting Priorities for Land Conservation** National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Scientific and Technical Criteria for Federal Acquisition of Lands for Conservation, 1993-02-01 This book responds to a congressional request to evaluate criteria by which land is acquired under the Land and Water Conservation Fund. The committee reviews criteria and procedures by which four agencies acquire lands for conservation, examines the historic public policy and scientific bases of criteria, and compares them with nongovernmental organizations and assesses the effectiveness of the agencies in preserving natural resources while achieving agency objectives. *Setting Priorities for Land Conservation* National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Scientific and Technical Criteria for Federal Acquisition of Lands for Conservation, 1993-02-01 This book responds to a congressional request to evaluate criteria by which land is acquired under the Land and Water Conservation Fund. The committee reviews criteria and procedures by which four agencies acquire lands for conservation, examines the historic public policy and scientific bases of criteria, and compares them with nongovernmental organizations and assesses the effectiveness of the agencies in preserving natural resources while achieving agency objectives.

**Nature-friendly Land Use Practices at Multiple Scales** Rebecca Lynn Kihlslinger, James M. McElfish, 2009 This unique book is organized around eight detailed case studies of private land developers, local governments, and public agencies that have worked across jurisdictional and ecological boundaries to effectively address habitat conservation. The book includes two essays by leading conservation biologists who link planning at scale with sound land use decisions. Book Jacket

**Conservation Trusts** Sally K. Fairfax, Darla Guenzler, 2001 In the wake of the Exxon Valdez oil spill, a conservation trust helped stabilize and regenerate the damaged area. When bird habitats along the Platte River were threatened by Grayrocks Dam, a similar trust came to their rescue. And if a family wants to protect its land for future generations, establishing a trust may be the best solution. For more than a century, bequests of land and funds for environmental protection have been common, but in recent decades, the trusts used to address conservation issues and resolve environmental disputes have diversified and grown significantly. This book examines a variety

of conservation organizations built on or close to trust principles some government creations some private some combinations of the two to explain how conservation trusts are created and how they work It explores strengths and weaknesses of the trust concept considers the widespread use of land trusts and presents case studies that both illustrate successes and give instructive examples of potential pitfalls Drawing on cases from Maine to Hawaii the authors examine the different kinds and configurations of trusts They consider government trusts that blend federal state and local agencies into a single entity or that derive funding from outside legislative and executive channels trusts established by government and private cooperation to share responsibility for jointly held and managed resources and trusts established by private organizations and families For each type they explain why each is created how it operates and whether it has been proven effective They also address the important issue of accountability and consider when a trust is not the answer to a problem As more Americans reject federal control of land in favor of local determination land trusts have become the most popular tool for the preservation of land habitats and species And as the sharing of authority among public private and diverse government partners becomes more prevalent sound guidelines for establishing effective trusts are critical This book shows how the trust template provides an invaluable approach for future conservation efforts and is a primer for anyone involved in environmental management

Restoration priorities and strategies Hagen, Dagmar, Kotiaho, Janne, Kareksela, Santtu, Lindhagen, Anna, Isaksson, Daniel, Päävinen, Jussi, Svavarsdóttir, Kristín, Tennokene, Margit, Hansen, Kjell Tore, 2016-10-06 Restoration is a tool to achieve several of the strategic targets of The Convention on Biological Diversity from 2010 Currently there is no standard for how to set priorities for restoration The aim of this project was to exchange knowledge between the Nordic countries and Estonia regarding experiences of restoration and priority setting with a landscape perspective Using case examples the project explores and discusses approaches for setting priorities and suggests possible ways of improved approaches for prioritization This includes how to improve Green Infrastructure and measures for protection of species and habitats in fragmented landscapes The case examples use different approaches and provide ideas reflections and take home messages to enhance future prioritization This report shows that there is a need for greater emphasis on the prioritization aspects of restoration

Climate Actions Brenda Groskinsky, 2022-03-15 This book offers a diverse set of solid concerted strategies in the development and implementation of specific climate actions in natural and built places where we all live The book also serves as a conduit of knowledge for those who are unsure on how they can make a difference for their families their communities and the natural places that surround them Through many actionable examples of mitigation efforts for the ever present effects of climate change especially for those who may not understand the wide range of climate action opportunities that are available Scientists academics and community leaders will find concrete examples on how they too can develop and implement climate action solutions

**Handbook of Biodiversity Valuation A Guide for Policy Makers** OECD, 2002-03-26 This Handbook describes the types of values usually associated with

biodiversity While there are exceptions to the need to prioritise economic values over other values economic valuation has a sound theoretical foundation that can help clarify the tradeoffs implicit in public policy decisions *Monitoring Plant and Animal Populations* Caryl L. Elzinga, Daniel W. Salzer, John W. Willoughby, James P. Gibbs, 2001-02-08 *Monitoring Plant and Animal Populations* offers an overview of population monitoring issues that is accessible to the typical field biologist and land managers with a modest statistical background The text includes concrete guidelines for ecologists to follow to design a statistically defensible monitoring program User friendly practical guide written in a highly readable format The authors provide an interdisciplinary scope to address the current widespread interest in monitoring in many environmental fields including pure and applied ecology conservation biology and wildlife management Emphasizes the role of monitoring in adaptive management Defines important terminology and contrasts monitoring with other data collection activities Covers the applicable principles of sampling and shows how to design a monitoring project Provides a step by step overview of the monitoring process illustrated by flow charts and references The authors also offer guidelines for analyzing and interpreting monitoring data Illustrates the foundation of management objectives and describes their components types and development Describes common field techniques for measuring important attributes of animal and plant populations Reviews different methods for recording monitoring data in the field managing the data and communicating data to policy makers

*Environmental Policy in North America* Robert G. Healy, Debora VanNijnatten, Marcela López-Vallejo, 2014-01-01 This comprehensive analysis of key issues in North American environmental policy provides an overview of how the US Mexico and Canada differ in their environmental management approaches and capacity levels and how these differences play into cross border cooperation on environmental problems The book offers insights into transboundary cooperation both before and after NAFTA and presents a framework for making environmental interaction more effective in the future The book is organized into two parts The first more general section compares the national contexts for environmental management in each country including economic conditions sociocultural dynamics and political decision making frameworks and shows how these have led to variations in policy approaches and levels of capacity The authors argue that effective environmental governance in North America depends on the ability of transboundary institutions to address and mediate these differences The book s second section illustrates this argument using four case studies of environmental management in North America biodiversity and protected areas air pollution smog greenhouse gas reduction and genetically modified crops *Federal Register*, 1988
