Shape Of Futures Past:

The Shape of Futures Past Chris Morgan, 1980 **Knowing Future Time In and Through Greek Historiography**

Alexandra Lianeri, 2016-03-07 From the early modern period Greek historiography has been studied in the context of Cicero's notion *historia magistra vitae* and considered to exclude conceptions of the future as different from the present and past. Comparisons with the Roman Judeo-Christian and modern historiography have sought to justify this perspective by drawing on a category of the future as a temporal mode that breaks with the present. In this volume distinguished classicists and historians challenge this contention by raising the question of what the future was and meant in antiquity by offering fresh considerations of prognostic and anticipatory voices in Greek historiography from Herodotus to Appian and by tracing the roots of established views on historical time in the opposition between antiquity and modernity. They look both at contemporary scholarly argument and the writings of Greek historians in order to explore the relation of time especially the future to an idea of the historical that is formulated in the plural and is always in motion. By reflecting on the prognostic of historical time the volume will be of interest not only to classical scholars but to all who are interested in the history and theory of historical time.

Futures Past Reinhart Koselleck, 2004 Modernity in the late eighteenth century transformed all domains of European life intellectual industrial and social. Not least affected was the experience of time itself ever accelerating change left people with briefer intervals of time in which to gather new experiences and adapt. In this provocative and erudite book Reinhart Koselleck a distinguished philosopher of history explores the concept of historical time by posing the question what kind of experience is opened up by the emergence of modernity. Relying on an extraordinary array of witnesses and texts from politicians philosophers theologians and poets to Renaissance paintings and the dreams of German citizens during the Third Reich Koselleck shows that with the advent of modernity the past and the future became relocated in relation to each other. The promises of modernity freedom progress infinite human improvement produced a world accelerating toward an unknown and unknowable future within which awaited the possibility of achieving utopian fulfillment. History Koselleck asserts emerged in this crucial moment as a new temporality providing distinctly new ways of assimilating experience. In the present context of globalization and its resulting crises the modern world once again faces a crisis in aligning the experience of past and present. To realize that each present was once an imagined future may help us once again place ourselves within a temporality organized by human thought and humane ends as much as by the contingencies of uncontrolled events.

Shapes of Time Michael McGillen,2023-12-15 *Shapes of Time* explores how concepts of time and history were spatialized in early twentieth century German thought Michael McGillen locates efforts in German modernism to conceive of alternative shapes of time beyond those of historicism and nineteenth century philosophies of history at the boundary between secular and theological discourses By analyzing canonical works of German modernism those of Karl Barth Franz Rosenzweig Siegfried Kracauer and

Robert Musil he identifies the ways in which spatial imagery and metaphors were employed to both separate the end of history from a narrative framework and to map the liminal relation between history and eschatology Drawing on theories and practices as disparate as constructivism non Euclidean geometry photography and urban architecture Shapes of Time presents original connections between modernism theology and mathematics as played out within the canon of twentieth century German letters Concepts of temporal and spatial form McGillen contends contribute to the understanding not only of modernist literature but also of larger theoretical concerns within modern cultural and intellectual history **Consensus**

Realities Stefan Wurm,2022-01-05 We perceive the world in which we live through our senses and make sense of it using our minds In this way we construct our very own consensus realities our subjective interpretations of the world as each one of us perceives and understands it What do we know about how we construct our consensus realities How do human body and mind connect as they somehow must to give us the experience of the world that we know we have The first three book chapters invite the reader to explore what the human brain philosophy of mind and psychology can tell us about the relationship between the human body and mind We all are curious about those things and exploring them is possible for all of us We have no other choice than to form our own consensus realities as it is through them that we can make sense of us in this world Many consensus realities only deviate from objective reality in as much as our personal vanity goes to make us more comfortable with who we are Others however can seemingly dissociate themselves to much greater degrees from objective reality endorsing fake news and false narratives creating their own make believe worlds in the process The fourth book chapter looks into some of the implications that has had in the past and might have in the future **Sociological**

Theory for Digital Society Ori Schwarz,2021-08-23 The digital revolution has not only transformed multiple aspects of social life it also shakes sociological theory transforming the most basic assumptions that have underlain it In this timely book Ori Schwarz explores the main challenges digitalization poses to different strands of sociological theory and offers paths to adapt them to new social realities What would symbolic interactionism look like in a world where interaction no longer takes place within bounded situations and is constantly documented as durable digital objects How should we understand new digitally mediated forms of human association that bind our actions and lives together but have little in common with old time collectives and why are they not simply social networks How does social capital transform when it is materialized in a digital form and how does it remould power structures What happens to our conceptualization of power when faced with the emergence of new forms of algorithmic power And what happens when labour departs from work By posing and answering such fascinating questions and offering critical tools for both students and scholars of social theory and digital society to engage with them this thought provoking book draws the outline of future sociological theory for our digital society The Future in Learning Science: What's in it for the Learner?
